A research report prepared under contract with the Research Division of the Programs Branch, Ministry of the Solicitor General of Canada. Published by the Communication Division, under the authority of the Hon. Bob Kaplan, P.C., M.P., Solicitor General of Canada. The views expressed in this report are those of Decision Dynamics Corporation and do not necessarily reflect the views or policies of the Solicitor General of Canada.

FOREWORD BY THE SOLICITOR GENERAL OF CANADA

When amendments to the firearms provisions of the *Criminal Code* were being considered by Parliament in 1977, the Government made a commitment to conduct a thorough and objective evaluation of the effectiveness of the firearms control program. Decision Dynamics Corporation, an independent consulting firm specializing in research related to the Criminal Justice system, was retained to carry out a three year study of the program. This is the final report based on their findings after three full years of data collection.

The process of evaluation is an important step towards the achievement of ongoing administrative and legislative improvements. The detailed information and findings of this evaluation study will greatly assist in assessing the degree to which the objectives of the firearms control provisions of the *Criminal Code* are being met. Of course, care must be exercised in reaching firm conclusions about the effectiveness of the program because of the large number of variables involved in this complex area of social research. Nevertheless, I am encouraged to note that the report concludes that the large number of changes in the rates of various types of firearms incidents and sentencing patterns indicate that the legislative amendments adopted by Parliament in 1977, and their effective administration have a positive impact.

My Ministry's publication of the work of independent researchers always carries a traditional and important disclaimer to the effect that the views of the authors do not necessarily reflect the views of the Solicitor General of Canada. In this case, the disclaimer is particularly important because it gives emphasis to the independence and

objectivity of the researchers' work.

Bob Kaplan, P.C., M.P.

ACKNOWLEDGEMENTS

Over the more than three years this study has been in progress, a wide variety of persons and organizations have contributed generously of their time and efforts. The assistance and co-operation of the following persons, offices and institutions are gratefully acknowledged: the Chiefs of Police, their officers and staff, particularly those in Central Records, of the police departments in Vancouver, Calgary, Toronto, Ottawa and Quebec City; the officers and staff of R.C.M. Police Division "H" in Nova Scotia and Division "F" in Saskatchewan; the officers and staff of the Firearms Registration and Administration Unit of the R.C.M. Police, Ottawa; the Firearms Officers and Registrars and their staff in Vancouver, Calgary, Toronto and Ottawa: the Quebec Police Force officers of the central Service des Permis in Montreal; each of the Chief Provincial/ Territorial Firearms Officers and their staff; each of the provincial hunter safety coordinators and their staff; the various Crown Attorneys, defence lawyers and judges in Vancouver, Calgary, Ottawa, Quebec City and Toronto who took time out of their busy days to be interviewed, particularly in the first year and one half of the study; the following departments or sections of Statistics Canada - the Vital Statistics and Disease Registry Section, the Hospital Morbidity Section, the Canadian Centre for Justice Statistics, and the Statistics Canada Information Centre: the Canadian Sporting Arms and Ammunition Association: the Firearms Policy Centre of the Ministry of the Solicitor General: and the Research Division of the Ministry of the Solicitor General. The assistance of Mr. Gerald Swartz of Canadian Loric Consultants Ltd., who contributed many helpful editorial and presentation suggestions also was appreciated.

Finally, very special thanks to three individuals are necessary. First, to Dr. John Kervin of the Department of Sociology, University of Toronto, whose advice in the preparation of the computer specifications, statistical testing and statistical interpretation was of inestimable value. His unfailing patience, good humour and dedication also

must be acknowledged.

Thanks also are extended to Dr. Gerry Leger, of the Research Division of the Federal Ministry of the Solicitor General. Dr. Leger's editorial comments and suggestions always have been valuable. But perhaps the qualities most deeply appreciated have been his unflagging patience and understanding over the years and no matter the circumstances.

Third, a deep indebtedness to Miss Elizabeth Wall must be acknowledged. The typing of the many drafts of the report and its tables and figures was a long and time consuming undertaking. But it was one which she completed, often in harrassed circumstances, with extraordinary dedication and persistence which went well beyond the call of duty.

ABSTRACT

This is the final report on a three-year study of the effectiveness of those provisions of the *Criminal Law Amendment Act*, 1977 which amended the *Criminal Code* sections relating to firearms control in Canada.

Two types of analyses have been conducted. The first was an "outcomes analysis" in which the incidence of crimes, accidents and suicides with firearms before and after the legislation have been examined in order to assess whether the legislation has promoted a reduction in firearms misuse. In a considerable number of cases, a decline in the proportion of occurrences with firearms subsequent to the legislation has been found. Most of these declines were modest, but in view of the consistency among the various statistics, it is concluded that the legislation did have a moderate impact on the use of firearms in Canada.

The other type of analysis was a "process analysis" which examines the implementation of the means of firearms control, for example, types of sentences imposed on conviction for criminal offences using firearms. Overall, the methods of firearms control encouraged by the legislation have been used. For example, convictions for firearm offences resulted in more severe sentences after 1979. Two notable exceptions relate to the infrequent implementation of mandatory prohibition orders following convictions of specified criminal offences, and the apparently infrequent compliance with the requirement that a report or return be given to a magistrate following a firearms search and seizure conducted on the grounds that the safety of an individual has been threatened. Notwithstanding these exceptions, the study has found that generally the police and judicial systems have effectively implemented the provisions of the legislation.

EXECUTIVE SUMMARY

INTRODUCTION

This report was prepared by Decision Dynamics Corporation on behalf of the Ministry of the Solicitor General of Canada. It is the third and final report on a three-year evaluation of the firearms control provisions found in Bill C-51, a Bill adopted by Parliament as the Criminal Law Amendment Act, 1977. The Act contained major amendments to the Criminal Code provisions governing firearms in Canada. Most of the amendments came into force on January 1, 1978. They included the imposition of stricter controls on the issuance of registration certificates which are necessary to acquire restricted weapons such as handguns, the creation of new types of firearms prohibition orders, the authorization of search and seizure without a warrant when a criminal offence may not necessarily have occurred, the creation of new criminal offences in relation to firearms use, and the provision for more severe penalties for the criminal use of firearms. On January 1, 1979, new provisions came into force requiring individuals to obtain a Firearms Acquisition Certificate (FAC) in order to acquire a firearm and requiring businesses not only dealing in restricted firearms, but also those dealing in non-restricted firearms and ammunition to acquire a business permit.

METHODOLOGY

The objectives of the firearms control provisions are to reduce access to firearms by potentially dangerous or irresponsible users; to reduce the criminal use of firearms; and to encourage responsible handling, storage and use of firearms. Two means were used to assess whether these objectives were met:

- outcome analyses of changes in the number of crimes, accidents, and suicides

with firearms since the legislation was enacted; and

- process analyses of the implementation and effect of procedures and practices associated with the legislation, that is, screening, sentencing, prohibition, search and seizure, safe handling and storage, and the regulation of businesses.

Data were collected from federal, provincial and local sources. The federal or national data included sentencing information found in the fingerprint report submissions kept by the R.C.M. Police (F.P.S. data), information on accidents and suicides from Statistics Canada, and data on crime in Canada compiled by the Canadian Centre for Justice Statistics. Provincial data were provided by the Chief Provincial/Territorial Firearms Officers (C.P.F.O.'s). Provincial hunter safety co-ordinators provided data on hunting accidents. At the local level, seven police forces-Vancouver, Calgary, Ottawa, Quebec City, Toronto and selected R.C.M. Police divisions in Nova Scotia and Saskatchewan-provided data on incidents with firearms and on certificates and

In some cases the impact of the legislation was assessed by comparing pre- and post-legislation data. When only post-legislation statistics were available, trend analyses were conducted to observe changes which had occurred since the legislation

was implemented.

CRIMES WITH FIREARMS

Two aspects of firearms crimes were examined; the incidence of such crimes, and the characteristics of the incidents and of suspects.

1. The Incidence of Firearm Crimes

Two categories of data were used for this particular analysis: national statistics on murder and robbery from the Canadian Centre for Justice Statistics, and local data from the police departments in Vancouver (1975 – 1981). Calgary (1977 – 1981), Toronto (1974 – 1981), and Ottawa (1976 – 1981), all of which are referred to as summary statistics. Using these data, the proportions of selected crimes committed with firearms before and after the legislation were compared.

Murder was the first type of crime examined. Nationally, the numbers of murders with firearms and the per capita rate steadily increased from 1961 to 1975, and have consistently declined since that time. In fact, in the period 1978 to 1981, the proportion of murders committed with firearms reached the lowest level since 1962. However, probably because of the small number of incidents, the analysis of homicides committed with firearms in the local city jurisdictions did not reveal any consistent decline (a substantial decrease occurred only in Vancouver).

The next crime category examined was attempted murder in the four city jurisdictions. In each case, there was a decline in the proportion of these incidents committed with firearms in the post-legislation period compared to pre-1978. In Vancouver, firearms were used in 51 percent of attempted murders during the years for which data were available prior to the legislation (1975-77), but in only 27 percent from 1978 to 1981. In Toronto, the percentage of attempted murders with firearms during the pre- and post-legislation periods dropped from 41 to 31 percent; in Ottawa, from 60 to 41 percent; and in Calgary from 48 to 39 percent.

The use of firearms in rape and indecent assault, assault, and woundings also was examined. Firearms use in these crime categories was relatively small and no sub-

stantial changes before and after the legislation were observed.

Of all the crimes examined, firearms were used most frequently in robberies. National data on robbery from 1977 to 1981 indicated that the total number of robberies with firearms increased. However, the increase in firearm robberies was less than for total robberies. While the total number of robberies rose by about 35 percent, robbery with firearms increased only by about 20 percent, whereas the use of other offensive weapons in robbery increased by about 63 percent. When expressed as a percentage of total robberies, firearms were used in 38.5 percent of robberies in 1977, and 34.4 percent in 1981.

The robbery data from the four city jurisdictions showed a decrease in the relative use of firearms in each city except Ottawa. The percentage of robberies committed with firearms dropped in Vancouver from 20 percent in the three years prior to the legislation to 13 percent in the four years following. Comparing the four year period before and after the 1978 firearms legislation in Toronto, the percentage of robberies involving firearms dropped from 23 percent to 19 percent. In Calgary, notwithstanding an increase in the absolute number of robberies involving firearms in the period following the legislation, the percentage of robberies involving firearms dropped slightly from 45 percent in 1977 to 42 percent in the four years 1978 to 1981.

A contrary finding was observed in Ottawa where a steady increase in all robberies and robberies with firearms was seen both absolutely and proportionately (from 25 to 33 percent). The increase was most noticeable in the four years 1978 to 1981 when the

number of robberies with firearms more than doubled.

Robbery in Canada is becoming a more frequent occurrence. On the other hand, nationally and in three of the four city jurisdictions, the percentage of robberies involving firearms decreased during the four year period following the legislation.

National data on offensive weapons offences showed an increase from 1977 to 1978 in the numbers of offences involving prohibited weapons. However, it was not possible to determine the extent to which these offences involved firearms. This was possible from the data in Vancouver and Toronto, where it was found that the percentage of weapons offences involving firearms declined after the legislation. In Vancouver, it dropped from 33 percent prior to the legislation to 18 percent after; in Toronto, from about 35 to 28 percent.

In summary, notwithstanding anomalies such as those found for robbery in Ottawa, there was a modest decrease in the post-legislation period in the proportionate use of firearms in the criminal incidents examined. Furthermore, because any decrease in the proportion of a crime committed with firearms indicates a corresponding increase in the proportion committed by other means, the data generally show that the relative use of other weapons in crime increased after the legislation. Data from Vancouver and Toronto on the use of knives in particular also show that there has been an increase in the proportions of homicides and attempted murders (but generally not for the other crime categories) committed with knives since the legislation. In most cases, the findings suggest that the greater controls over firearms have resulted in a displacement effect; that is, an increasing proportion of crime is being committed with other weapons.

2. The Characteristics of Firearm Crimes

While the data generally show that the proportion of crime committed with all firearms combined declined from the pre- to the post-legislation periods, there was less evidence of a similar decline in the use of handguns. As a result, when firearms were used there was an increasing tendency for the firearm to be a handgun. These findings indicate that the greatest impact of the legislation has been on unrestricted firearms, such as rifles and shotguns. However, while the most frequent type of firearm in robbery was a handgun, the use of handguns in the other crimes was far less prevalent.

The most frequent type of firearm incident in the city jurisdictions was robbery, and usually over 70 percent of these incidents occurred in business premises. Four cities showed a decline in firearm offences in the home, between 1979 and 1980, but only two cities continued this decline into 1981.

The analysis of the characteristics of suspects charged with firearm offences indicated that they were usually from 16 to 24 years old in the case of robbery offences, but tended increasingly to include older age groups for other offences. Over 90 percent of the suspects were males. The two rural jurisdictions were able to provide information on whether suspects were under the influence of alcohol or drugs at the time of the incident. Although the base numbers were quite small, the data showed that over 60 percent of suspects were under the influence of alcohol or drugs at the time of the incident.

The final aspect examined relating to the characteristics of suspects was the proportion of suspects having criminal records and the nature of the records. It was observed that nationally, over 50 percent of suspects involved in firearm crimes had previous criminal records although no changes of note in this figure were observed over the period 1978 to 1981. On the other hand, of suspects that did have records, between 44 percent and 50 percent had been subject to five or more charges and this rate increased over the four years. Increases also were found in the percentage of suspects with criminal records who had prior records involving violent offences, but no major changes were found in the percentage rate of suspects with previous firearm offence records. It also was found that between 23 percent and 29 percent of suspects with records had been sentenced to at least one penitentiary term of two years or more, but no major changes over time were observed in this proportion.

NON CRIMINAL INCIDENTS WITH FIREARMS

1. Accidents With Firearms

Vital Statistics data from Statistics Canada indicate that the annual number of fatal firearm accidents from 1971 to 1980 declined from 145 to 75, a drop of 48 percent. Controlling for increases in population, the annual per capita rates of fatal firearm accidents show that while the decline began prior to 1978, a further drop occurred after the introduction of the legislation. Further data on both fatal and non-fatal firearm accidents from the Hospital Morbidity Section of Statistics Canada also indicate lower rates of firearm accidents during the post-legislation period. A similar decrease also was observed in the rate of hunting accidents relative to the number of hunting licences sold.

2. Suicides with Firearms

The national and local data also show that the use of firearms in suicides decreased after the legislation. The national data indicate that the percentage of suicides committed with firearms steadily increased until 1977, and decreased after that time. The proportions with firearms in 1979 and 1980 (the last 2 years of data) were less than for any of the previous years for which data were available (since 1971). The data from the local city jurisdictions show a similar decrease after the introduction of the legislation.

In summary, the data on crime, accidents and suicides show that there has been a decrease in the use of firearms in these incidents since the legislation. However, various factors other than the legislation may have been responsible for these decreases, and a direct causal connection between the legislation and these changes cannot be made. Nevertheless, the consistency of these changes among the many different measures coincident with the introduction of the legislation lead to the conclusion that the legislation did have a moderate impact on these incidents.

IMPLEMENTATION AND EFFECT OF LEGISLATIVE PROVISIONS

1. Screening

The Criminal Code categorizes firearms into three groups: prohibited weapons, possession of which by private individuals is barred absolutely; restricted weapons which are available only in specified circumstances and which require a registration certificate and, if applicable, a carrying permit; and other firearms (which this report refers to as unrestricted firearms), which are available with minimal conditions and which require a Firearms Acquisition Certificate (FAC). Screening is the process by which it is determined whether the applicant meets the criteria attached to the particular certificate or permit. The rates of issuance and refusals of FAC's, registration certificates and carrying permits were examined.

Firearms Acquisition Certificates (FAC's): Because FAC's are valid for five years, a decline in the number of FAC's issued was expected by 1981, the third year in which the system had been in effect. Nationally, the number of FAC's per 10,000 population declined from 104 in 1979, to 87 in 1980 and to 68 in 1981. The highest number of FAC's issued per 10,000 population were in the Yukon and the Northwest Territories and the lowest in Ontario and Prince Edward Island.

In all provinces, the rate of FAC refusals was low although there was some increase in the percentage of applications refused; from 0.39 percent in 1979, to 0.52 percent in 1980 and 0.60 percent in 1981. The predominant reasons for FAC refusals appear to be those related to a criminal record or a history of violent behaviour.

An applicant refused a FAC is entitled to request a reference to a magistrate, essentially an appeal from the refusal. About eight percent of FAC refusals were appealed over the three years 1979 to 1981, and about 50 percent of these appeals were successful.

Registration Certificates: In order to acquire a registration certificate the applicant must be eighteen years of age, in possession of a valid FAC and meet one of the criteria for requiring restricted weapons set out in the legislation. The certificate is issued by the Commissioner of the R.C.M. Police, but the initial screening is conducted by the local registrar of firearms, usually located in the local police force.

November 1978 was declared a firearms amnesty period, and as a result of the amnesty, over 40,000 firearms were submitted for the purpose of establishing or updating registration. The data on registration certificates issued subsequent to this

time must be seen in this context.

Registration certificates are issued both for newly registered restricted weapons and the transfer of previously registered weapons. Probably as a result of the amnesty program, the rate of certificates issued for transfer purposes increased from 23 per 10,000 in 1978 to about 36 per 10,000 in 1980. But between 1980 and 1981 there was a sharp decline to 15 certificates per 10,000 population. Certificates issued for transfer constituted between 70 to 90 percent of all certificates issued in the four years examined. The rate of first time certificates issued increased between 1978 and 1979, from eight to 13 per 10,000 population. This rate declined to three in 1980 and then increased to 6 per 10,000 population in 1981. Despite this increase, the rate of first-time registrations in 1981 remained below the 1978 level.

A dramatic decline in the numbers of registration certificates refused and revoked over the period 1978 to 1981 occurred; 168 refusals in 1978 compared to one in 1981; 93 revocations in 1978 compared to three in 1981. The large numbers in 1978 and 1979 again probably is due to the large volume of applications during the amnesty period, but the decline in 1980 and 1981 also may be due to the more rigorous screening and

increased use of prohibition provisions subsequent to the legislation.

Carrying Permits: Nationally, no major changes were observed in the number or rate of carrying permits issued. From 1979 to 1981 about 12 carrying permits were issued per 10,000 population. About 75 percent of these were issued for the purpose of target practice at a club and about 20 percent for purposes related to occupation, e.g., security guards.

The percentage of carrying permit applications which were refused was very small

and declined from 2.3 percent in 1979 to 0.6 percent in 1981.

Looking at the screening process as a whole, the increase in the rate of FAC refusals compared to the decline in the refusal rates for registration certificates and carrying permits suggests that the screening process has its greatest impact at the time of the applicant's first introduction to the system.

2. Sentencing

An important component of Bill C-5l was the increasing of the severity of criminal sanctions governing the misuse of firearms. One of the most important measures was the new offence of using a firearm while committing or attempting to commit an indictable offence, s.83. Conviction of a s.83 offence should incur a minimum jail

sentence of one year and a mandatory firearms prohibition order.

Using the national fingerprint records from the R.C.M. Police (the F.P.S. data) and the local occurrence report data from the Vancouver, Ottawa and Quebec City police forces, the sentencing patterns for firearms offences from 1979 to 1981 were examined. In addition, using data from the Vancouver Police Force, the disposition of charges of robbery with offensive weapons (firearms and non-firearms) from 1976 to 1981 also was examined.

Changes in the Number of Firearms Charges: Nationally, the total number of firearms charges increased dramatically between 1979 and 1980 (by 31.0 percent) and to a lesser extent between 1980 and 1981 (by 5.4 percent).

Changes in the Disposition of Firearms Charges: Nationally, the percentage of charges resulting in "no conviction" remained constant over the three years examined, which suggests that the legislation did not lead to increasing numbers of charges for which there was insufficient evidence for convictions.

On the other hand, a moderate increase in the percentage of firearms convictions resulting in jail terms was found in 1980 and 1981 as compared to 1979. An examination of the dispositions of convictions for the offence of using a firearm in an indictable offence (s.83) indicated that in keeping with the mandatory jail term, over 90 percent of such convictions incurred jail terms in all three years examined, and this percentage showed a slight increase over the time period; from 92.9 percent in 1979 to 96.4 percent in 1981.

Changes in the Jail Terms Imposed for Firearms Offences: Not only was an increase in the percentage of firearms convictions resulting in jail terms observed but an increase in the length of jail terms imposed was found. Nationally, the mean jail term of the aggregate of all firearms convictions (except s.83 offences) increased from 5.4 months in 1979 to 7.1 months in 1981. Furthermore, an increase was found in the percentage of convictions incurring jail terms of one year or more; from 15.5 percent in 1979 to 21.9 percent in 1981.

Changes in Consecutive Jail Terms: Another aspect of the new offence of use of a firearm in an indictable offence (s.83) is the mandatory provision that jail terms imposed upon conviction be consecutive to any jail terms imposed upon conviction of accompanying charges. Nationally, of s.83 jail terms imposed jointly with jail terms on accompanying charges, about 82 percent were consecutive in 1979, which increased to about 87 percent in 1980 and 1981. Given the mandatory provision in s.83, it is noted that 13 percent of s.83 jail terms accompanied by multiple jail sentences were not consecutive.

Of the remaining firearms charges, there was some upward movement in the percentage of multiple and consecutive jail terms from 14.5 percent in 1979 to 17.1 percent in 1981.

The Use of s.83 Charges: A robbery committed with a firearm is an indictable offence, and accordingly should be accompanied by a s.83 charge. The national data (F.P.S.) indicated that about 90 percent of robbery charges were accompanied by s.83 charges. However, this high rate may have been due to the fact that the only robberies included in this data base were those which also had some sort of firearm charge. Accordingly, the data from the local city jurisdictions probably provide a more accurate assessment of the relationship between s.83 and robbery charges, because these data bases included all robberies involving firearms, regardless of whether any firearm charges were laid. These data generally indicated that less than 50 percent of firearm robbery charges had accompanying s.83 charges. The lack of s.83 charges may have been due to the fact that evidence was not always available to prove that the alleged firearm was not some form of imitation firearm. However, notwithstanding the relatively low incidence of joint s.83 and robbery charges, in each of the city jurisdictions the rate of joint charges was higher in 1981 than in 1979. A slowly increasing awareness of the mandatory provisions of s.83 on the part of police, Crown Attorneys and judges may also be occurring.

Effect of s.83 Minimum Jail Terms on Robbery Jail Terms: The minimum one year jail term contained in the s.83 offence may have been viewed by some members of the judiciary as an infringement of judicial discretion. In order to ascertain whether judges were subtracting the one year jail term from the jail term that might have been imposed on accompanying convictions, the jail terms imposed on convictions of charges of robbery with a firearm, accompanied and not accompanied by a s.83

charge, were examined. It was expected that if judges had compensated, less severe iail terms would have been imposed for the robbery convictions with an accompanying

s.83 charge than those without a s.83 charge.

Overall, the data did not support this prediction. The percentage of robbery convictions with s.83 charges that resulted in jail terms was consistently higher than for robbery convictions without s.83 charges. This indicates that there was no systematic compensation in the severity of robbery sentences because of the mandatory s.83 jail

Sentences for Robberies With Offensive Weapons Before and After the Legislation: The analyses of the effect of the s.83 minimum jail term on robbery jail terms revealed that the average jail term for robberies increased from 1979 to 1981. In order to assess whether this increase was related to the implementation of Bill C-51 or was part of a trend to impose stricter sentences for all robberies, the dispositions and jail terms incurred for robbery charges with offensive weapons in Vancouver from 1976 to 1981 were examined.

For firearm robbery convictions, there was a decrease in sentences of 2 to 5 years and an increase in sentences of five years or more after the legislation. The opposite pattern of findings occurred for robberies with other offensive weapons: there was an increase in the proportion of sentences of 2 to 5 years and a decrease in sentences of five years or more. For both groups, little change occurred with respect to the percentage sentenced to less than two years.

These data indicate that persons convicted of robbery with firearms were given longer jail terms after the legislation than before. They also indicate that the longer sentences were not part of a trend to stricter sentences for all robberies, because sentences of five years or more decreased for robberies with other offensive weapons after the legislation. During both time periods, robberies with firearms were more likely to result in longer jail sentences than those committed with other offensive weapons.

Impact of Previous Criminal Charges on Current Sentences: The data indicate clearly that suspects with previous criminal records have greater chances of going to jail on a current firearms-related conviction than those without records. If those records were for violent or firearms offences, the jail terms were for increasingly longer terms. Over the four-year period 1978 to 1981, the mean jail sentence for accused with previous firearm offence records was 11.1 months, compared to 7.9 months for those without. For those with previous records involving violence, the mean jail sentence was 10.0 months, compared to 7.9 months for those without violent offence records. Furthermore, the percentage of repeat firearms offence offenders incurring a jail term of one year or more increased from 28.2 percent in 1978 to 35.4 percent in 1981. These data show that a criminal record did have an impact on the current disposition, and in particular, that courts are dealing with repeat firearm offenders with greater severity.

3. Prohibition

The firearms control legislation provided for prohibition orders that can be issued by a court to prevent certain individuals from owning, possessing or having control of a firearm, ammunition or explosive substance for a specified number of years. There are six prohibition categories, three of which arise subsequent to a conviction for a criminal offence (conviction prohibitions), and three which can occur in non-criminal situations (non-conviction prohibitions).

Conviction Prohibitions: Of the three conviction prohibitions, one is mandatory upon conviction for certain offences (s.98(1)). One of these offences is use of a firearm in an indictable offence (s.83). In order to assess the enforcement of this mandatory order the percentage of s.83 convictions incurring a prohibition order was examined.

It was found that nationally in the three years 1979 to 1981, more than 80 percent of s.83 convictions did not incur the mandatory prohibition order. Although there were modest improvements over the three years, from 11.3 percent in 1979 to 17.3 percent in 1981, it is clear that mandatory prohibition orders are enforced infrequently. It may be that some Crown Attorneys and judges are unaware of the mandatory nature of s.98(1).

Non-Conviction Prohibitions: The first type of non-conviction prohibition order arises in situations where a peace officer has made an application to a magistrate on the grounds "that it is not desirable in the interests of the safety of the person against whom the order of prohibition is sought or of any other person" (pre-emptive prohibition). This type of prohibition is used most often in situations involving domestic and neighbour confrontations or unsafe storage habits. Due to the vagueness of procedural guidelines concerning the conduct of such a hearing, some reluctance to use the pre-emptive application procedure was found if the search and seizure procedure (noted below) could be used, but the section was useful in circumstances where no search and seizure had been conducted.

The second type of non-conviction prohibition arises on FAC references, that is, appeals. The legislation provides that if the refusal for a FAC is confirmed by the magistrate, a prohibition shall be ordered. The implementation of these types of

mandatory orders appears to be very good.

The third type of non-conviction prohibition may be ordered pursuant to a hearing before a magistrate, held subsequent to a search and seizure of firearms by police when an order of forfeiture is sought. In such instances a prohibition order can be issued along with the forfeiture order. It was found that if the circumstances warranted an order for forfeiture of firearms, then most magistrates considered that a prohibition order also was justified.

4. Search and Seizure

Of the four categories of search and seizure which relate exclusively to firearms and other offensive weapons, two apply in circumstances of perceived danger where a criminal offence may not necessarily have occurred. Section 101(1) of the *Criminal Code* authorizes search and seizure with a warrant when there are reasonable grounds to believe "that it is not desirable in the interests of the safety of that person, or any other person" that the individual should have possession of any firearms. Search and seizure without a warrant is authorized by s.101(2) if there are reasonable grounds for believing that "the danger to the safety of that person or other persons is such that to proceed by way of an application (for a warrant) . . . would be impracticable . . . "

Comprehensive data on firearms searches and seizures were not available because most police departments do not keep centralized records of such searches. Accordingly, no statements can be made as to the actual circumstances and frequency of s.101 searches and seizures, particularly those conducted without a warrant.

As a safeguard against abuse, the legislation provides that following all such searches, with or without a warrant, the Attorney General immediately shall make a return or report to a magistrate showing the grounds upon which the search was conducted. The use of returns appears to be limited. For the most part they seem to be made only if a seizure has occurred and a request for forfeiture was intended. If returns are made only where evidence was sufficient to support a forfeiture application, the protection afforded by the procedure becomes redundant.

On the other hand, if weapons are seized and forfeiture desired, the search and seizure hearings before the magistrate appear to run with relative smoothness and the percentage rate of forfeiture applications granted is high. The concept of prevention behind such hearing seems to be well recognized.

5. Safe Handling and Storage

Bill C-51 introduced a variety of measures to promote responsible and safe handling of firearms both by individuals and firearms businesses. The extent to which safe handling and storage practices are implemented is difficult to assess. The only practicable means available was to assess the number and disposition of criminal

charges laid in relation to unsafe practices. An assessment of such charges revealed that with the exception of careless use of firearms, the number of charges under the *Criminal Code* sections governing safe handling and storage was quite small.

Nationally, the number of careless use charges increased between 1979 and 1980, but remained stable in 1981. Such charges constituted 16.7 percent of total firearms charges in these three years. If a conviction occurred, careless use convictions were the least likely of the firearms offences examined to result in a jail term; about 20 percent resulting in jail. Although these convictions were the most likely of the firearms offences to incur prohibition orders, less than 35 percent did so.

The number of careless use charges probably reflects greater enforcement by police and Crown prosecutors. Notwithstanding the low percentage of convictions incurring jail terms, higher conviction and prohibition rates indicate that courts are responding to the emphasis on the promotion of safe handling of firearms found in Bill C-51.

0-51.

6. Regulation of Businesses

As of January 1, 1979 businesses dealing in both restricted and non-restricted firearms were required to obtain a permit. This must be renewed annually. Nationally, the number of retail business permits issued for the purpose of selling unrestricted and restricted firearms remained quite stable in 1980 and 1981. The number of permits for wholesalers, manufacturers and gunsmiths increased between 1980 and 1981. Furthermore, the number of business permit refusals was very low. By 1981, only one refusal was recorded. Notwithstanding the new requirements for business permits and new requirements regarding storage and record keeping, the number of retail and business permits has remained constant.

CONCLUSIONS

Numerous modest changes in the rates of various types of firearms incidents and sentencing patterns occurred subsequent to the implementation of the legislation. The large number of these changes leads to the conclusion that the legislation did have a moderate impact on the use of firearms.

The principal findings of the study are:

1. The Outcomes

The proportion of violent crimes committed with firearms declined in the post-legislation period.

Where firearms were used in violent crime, there was an increasing trend for the firearm to be a handgun.

There has been a moderate displacement of firearms by other weapons in robberies.

There was strong relationship between alcohol and drug use and firearms misuse in the two rural jurisdictions.

Suspects with criminal records who were involved in crimes involving firearms tended increasingly to have more serious records.

Accidents with firearms were declining prior to 1978 but the legislation contributed to further downward trends.

Suicides with firearms declined moderately in the post-legislation period.

2. The Processes

Following 1979, courts imposed more severe sentences for firearms offences.

When convictions for the offence of use of a firearm in an indictable offence (s.83) occurred, the mandatory sentencing provisions tended to be enforced and the extent to which they were enforced increased over the three years 1979 to 1981.

Robberies with firearms resulted in longer jail sentences after the implementation of Bill C-51.

Following 1979, sentences for repeat firearms offenders were more severe.

The requirement for the mandatory imposition of prohibition orders following specified criminal convictions was seldom met.

The requirement that a return to a magistrate be made subsequent to a s.101 search and seizure was seldom met.

Recommendations

- 1) More precise procedural guidelines should be provided regarding the conduct of the various hearings provided in the legislation.
- The application of the return procedure following a s.101 search and seizure needs to be more clearly delineated.
- 3) The mandatory nature of the s.98(1) prohibition order needs to be emphasized to Crown Attorneys and judges.

Chapter I

INTRODUCTION

In February, 1979, the Ministry of the Solicitor General of Canada retained Decision Dynamics Corporation to conduct an independent evaluation of the firearms control provisions contained in the *Criminal Law Amendment Act*, 1977 (Bill C-51). The overall goal of this legislation was to reduce the number of firearm incidents in Canada. Accordingly, a major focus of this evaluation study has been to assess changes in the use of firearms in criminal and non-criminal incidents (e.g., accidents, suicides).

However, because firearm incidents can be influenced by a variety of factors other than the legislation (e.g., economic conditions), no direct causal connection between the legislation and any changes in firearm incidents can be made. The study was designed to assess the extent to which firearm incidents have been reduced since the implementation of the legislation in 1978.

The study also was designed to collect detailed information to monitor how the various provisions of the legislation have been implemented. The legislation contained a number of different provisions such as the introduction of the Firearms Acquisition Certificate (FAC), more severe sentences for the use of firearms during the commission of crimes, stricter controls over business establishments that sell firearms, and new categories of firearm prohibition orders. These provisions are contained in Appendix 4 of this report. By examining the operation and to some extent the effects of these different provisions, the study was intended to provide useful information on exactly how the legislation has been working to date. This kind of "process analysis", combined with the previously noted analysis of firearm incidents ("outcome analysis"), provides a more complete assessment of the overall effectiveness of the legislation.

The first progress report from this evaluation was published in 1981 by Solicitor General Canada. This report described the background and methodology of the study, the legislative and administrative provisions of the legislation, and presented preliminary findings after one year of data collection. A brief second progress report was published in early 1983, in *Focus on Firearms*, a newsletter of the Firearms Policy Centre of the Ministry. The present report presents the complete findings after three years of data collection.

Chapter II of this report examines the findings relating to the incidence of crimes involving firearms before and after the legislation. It also describes the characteristics of criminals and criminal incidents involving firearms. Chapter III describes the use of firearms in non-criminal incidents (accidents and suicides). Chapter IV assesses the implementation of the different provisions of the legislation. A summary of the principal findings from the study is contained in Chapter V.

The different data sources for this study were described in detail in the first progress report, and are further described briefly when first presented in the following chapters. It should be noted, however, that in some instances there have been modifications to some of the data presented in the progress reports, due to revisions and up-dating of data bases. Revisions have been explicitly pointed out where they have

caused a reappraisal of conclusions or interpretations made in the previous reports. It also should be noted that the following chapters present only the most pertinent findings, using graphic summaries whenever possible for ease of presentation. Readers should therefore consult the detailed statistical tables in the appendices for further information. All references in the body of the report to tables with the prefix "A" indicate that the table will be found in an appendix.

Chapter II

CRIMES WITH FIREARMS

This chapter presents data relating to the criminal use of firearms. The first section of the chapter examines the incidence of selected crimes with and without firearms before and after the start of the legislation in 1978. The second section describes the characteristics of criminals and criminal incidents involving the use of firearms.

National statistics over time on the use of firearms in crime were available only for murders and robberies. Detailed data for other kinds of crimes, however, have been obtained from the summary statistics and occurrence reports of several local police departments.

A. THE INCIDENCE OF CRIMES WITH FIREARMS

Has There Been Any Change In The Use Of Firearms In Murders And Homicides?

National statistics on the use of firearms in murder¹ are presented in Tables A1.1 and A1.2 in Appendix 1, and are summarized in graphic form in Figures II.1 and II.2. These data show that:

- The annual number of murders as well as the per capita rate of murder (per 100,000 population) increased steadily between 1961 and 1975, but has since shown a pattern of decline. The decline in the per capita rate continued to the end of 1980, but showed an increase in 1981 compared to 1980. However, the absolute number of murders and the per capita rate in 1981 remained below the 1975 figures.
- The annual number of murders with all firearms (including handguns) and the per capita rate also increased steadily from 1961 to 1975, and have consistently declined since that time. This trend also occurred with respect to the use of handguns in murders, although the differences in these rates have been much smaller in magnitude.
- The only difference in this pattern occurred with respect to the rate of murder by other means. The per capita rate of murder by means other than firearms continued to increase until 1979, showed a slight decline in 1980, but again increased in 1981. It is also worth noting how the per capita rates for murders with firearms and by other means, shown in Figure II.1, were quite similar up to the end of 1974, but have since diverged. The rates for murder by other means have generally continued to increase, whereas the firearms murder rates have decreased.

Because the overall murder rates have declined since 1975, it is important for purposes of this study to examine firearm murders as a percentage of total murders, to determine if the relative use of firearms is also decreasing. Figure II.2 (also see Table A1.2) reveals that murders by firearms as a percentage of all murders have also shown a marked pattern of decline since 1974 and 1975. The decline in firearm murders relative to all murders appears to be particularly noticeable since the start of the legislation in 1978. Although the percentage of murders with firearms began to decrease in 1975, the percentages from 1978 to 1981 are the lowest they have been since 1962.

MURDER WITH ALL FIREARMS AND WITH HANDGUNS ONLY AS A PERCENTAGE OF ALL MURDERS CANADA 1961 — 1981

L = Start of legislation, January 1, 1978

Source: Canadian Centre for Justice Statistics

Handgun murders relative to all murders have declined since the peaks in 1974 and 1975, but no noticeable differences in these rates have appeared since 1978. Overall, the relative use of handguns would appear to have remained fairly stable from 1961 to 1981.

In summary, although the decline in the per capita and relative rates of firearm murders began prior to the legislation, these rates would appear to have declined further since the start of the legislation. However, the pattern with respect to handgun murders is less clear. There have been further reductions since the legislation, but the differences have been smaller than for all firearms combined.

Detailed statistics on the use of firearms in homicides (including manslaughter) were obtained from the summary statistics from the police departments in Vancouver, Calgary, Toronto and Ottawa (see Tables A1.3 to A1.6 in Appendix 1). Because of the relatively small number of incidents, the yearly percentage of homicides committed with all firearms and with handguns only have been aggregated for each jurisdiction for before and after the legislation.² These aggregate percentages are shown in Figure II.3.

These data must be interpreted with caution because of the relatively small number of incidents in each jurisdiction, and because statistics were available for only a few years prior to the start of the legislation. The "pre" data in Vancouver refer to 1975-77; in Toronto to 1974-77; in Ottawa to 1976-77; and in Calgary to 1977 only. In all jurisdictions, the "post" legislation data refer to 1978-81, inclusive. Extreme caution is warranted for Ottawa and Calgary because of the few cases of firearm homicides, and especially in Calgary, where only one year of data was available prior to the start of the legislation.

Perhaps because of these limitations, no consistent pattern can be discerned in these local summary data. The only notable difference would appear to be in Vancouver where the percentage of homicides with all firearms dropped from 21.4 percent, prior to the legislation, to 14.3 percent afterward. A slight increase occurred in Ottawa and Calgary. However, because of the limitations noted above, it is not possible to discern any clear trends.

In conclusion, the analysis of national murder data has shown a trend to lower rates of firearm murders in the post-legislation period. The local summary data on homicides, however, have not revealed any consistent decline, most likely because of the small numbers involved.

2. Has There Been Any Change In The Use Of Firearms In Attempted Murders?

Pre – post differences in the relative use of firearms in attempted murders for the four city jurisdictions are displayed in Figures II.4 (also see Tables A1.3 to A1.6). In each case there has been a decline since the legislation in the percentage of incidents with firearms. The greatest differences occurred in Vancouver and Ottawa, where the overall decline in each case was approximately 20 percent, In Vancouver, the percentage of attempted murders with firearms dropped from 51 percent prior to the legislation to 27 percent for the years following. In Ottawa, the relative use of firearms dropped from 60 percent to 41 percent.

The findings with respect to the proportion of attempted murders with handguns failed to show the same pattern of decline after the legislation.

3. Has There Been Any Change In The Use Of Firearms In Rape And Indecent Assault?

The data on rape and indecent assault are not complete for Vancouver or Calgary. However, in all four city jurisdictions the data show that the use of firearms in these crime categories is very infrequent. Guns are not a common weapon in violent sexrelated offences and therefore no before- and after- legislation differences are perceptible (see Tables A1.3 to A1.6).

Figure II.3

HOMICIDES WITH ALL FIREARMS AND WITH HANDGUNS ONLY AS A PERCENTAGE OF ALL HOMICIDES FOUR CITIES

Source: Summary statistics from local police departments

4. Has There Been Any Change In The Use Of Firearms In Assaults?

Only Vancouver, Calgary and Toronto provided data on assaults with firearms. In Vancouver, the total number of assaults increased over 77 percent from 1976 to 1981, but assaults with firearms never constituted more than one percent of total assaults. The same result held true in Toronto, where assaults increased approximately 40 percent between 1974 and 1981, but firearms were involved in less than one percent of all assaults. The highest absolute number of incidents involving firearms was 27 in 1980. In Calgary, accurate data are available only for 1979 to 1981, but there were no more than four incidents in any one year.

In summary, it does not appear that any consistent changes occurred in the use of firearms in assaults in Vancouver, Toronto and Calgary for the period following the

firearms control legislation.

Has There Been Any Change In The Use Of Firearms In Woundings?

The relative use of firearms in woundings has not been substantial during the period covered by this study. The aggregated percentage use of firearms in the four cities before and after the legislation is displayed in Figure II.5 (see Tables A1.3 to A1.6). While some small differences are apparent, the findings fail to reveal any consistent pre - post differences.

Has There Been Any Change In The Use Of Firearms In Robberies?

Robberies represent not only a relatively frequent crime, but one in which the use of firearms is common. This crime is therefore of particular interest in examining differences before and after the firearms control legislation.

National statistics on firearm robberies are available for 1977 to 1981 (see Table A1.7). Over these five years, total robberies have increased about 35 percent (from 19,491 to 26,292), whereas robberies with firearms increased only by 20.4 percent (from 7.507 to 9.040). On the other hand, robberies with other offensive weapons increased by 62.8 percent (from 3,350 to 5,455).

The data on the different forms of robbery can also be examined for each year as a percentage of total robberies, as shown in Figure II.6. This shows a steady decline in firearm robberies from 38.5 percent in 1977 (the year preceeding the implementation of the legislation) to 34.4 percent in 1981. In contrast, robberies with other offensive weapons have increased from 17.2 to 20.8 percent during this period. Overall, these findings clearly indicate a reduction in the relative use of firearms in national patterns of robbery despite the fact that total robberies have increased. The fact that robberies with other offensive weapons have correspondingly increased would suggest that other weapons are replacing firearms in this crime.

The relative use of firearms in robberies in the four city jurisdictions is shown in Figure II.7 (see also Tables A1.3 to A1.6). These data show that total firearms robberies as a percentage of all robberies decreased after the legislation in all jurisdictions except Ottawa, where they increased from 25 percent (for 1976 and 1977) to 33 percent (during 1978 to 1981). Ottawa is also the only city where the relative use of handguns substantially increased after the legislation (Calgary had a very small increase). Given the national trend, the incidence of robberies with firearms in Ottawa would appear to be a result of local factors.

In summary, while total robberies have increased, the relative use of firearms in robberies has decreased nationally and in three of the four local jurisdictions since the start of the legislation. On the other hand, there does not appear to have been any major change in the relative use of handguns in this crime (handgun data are only available from city jurisdictions).

7. Has There Been A Change In The Number Of Weapon Offences Involving Firearms?

National data on offensive weapon offences are compiled by the Canadian Centre for Justice Statistics. These are separated into four groupings: explosives, prohibited weapons (weapons which the legislation bans absolutely), restricted weapons (weapons which the legislation controls the possession and use) and other offensive weapons, e.g., rifles, knives, pellet guns. This last group made up over 70 percent of all offensive weapon offences over the years 1977 to 1981, but can not be broken down by type of weapon. Accordingly, the discussion of weapons charges nationally is confined to offences relating to prohibited and restricted weapon offences.

Nationally, there was a 77.8 percent increase in the absolute number of prohibited weapons offences between 1977 and 1981 (from 1,524 to 2,709). Restricted weapons offences increased by only 1.9 percent over the same period (2,008 to 2,047). The largest annual increase in prohibited weapons offences occurred between 1977 and 1978, when they increased by 37.2 percent. This rise was coincident to the implementation of Bill C-51. It may relate partly to the wider definition of prohibited weapons, which increased the types of weapons falling into this class, and partly to a greater cognizance of prohibited weapons offences on the part of police as a result of

the publicity accompanying the passage of the legislation.

It was not possible to determine the extent to which these national data referred to firearms as opposed to other types of offensive weapons. For example, a knife with a blade that opens automatically by gravity or centrifugal force is a prohibited weapon. However, the local summary statistics from Vancouver and Toronto (see Tables A1.3 and A1.4) reported whether the offensive weapon offences involved firearms. The aggregate percentage of total offensive weapon offences involving all firearms combined and for handguns only before and after the legislation are shown in Figure II.8. This shows that the percentage of weapon offences involving all firearms combined declined in both jurisdictions after the legislation. In Vancouver, the percentage of weapon offences involving firearms declined from 32.8 percent prior to the legislation to 18 percent in the period following; in Toronto, the relative use of firearms in offensive weapon offences decreased from 35.5 to 28.2 percent.

The percentage of weapon offences involving handguns also declined from 24.9 to

15.7 percent in Vancouver, and showed a slight decrease in Toronto.

8. Has There Been Any Change In The Use Of Other Weapons In Crime?

Evidence that "other means" have proportionately increased while relative firearm use has decreased since the legislation was presented in Figures II.1 and II.6, for the national data on murders and robberies. Furthermore, since any decrease in the proportion of a crime committed with firearms implies a corresponding increase in other means of committing the crime, then the previously presented data from the local jurisdictions showing that the relative use of firearms decreased after the legislation also implies that the relative use of other weapons for these crimes increased. Therefore, in addition to the national data on murder and robbery, the local data indicate that the relative use of other weapons increased after the legislation, especially for attempted murders, robberies (except for Ottawa) and for weapon offences.

The summary statistics from Vancouver and Toronto also allow an examination of the more specific question of whether the use of knives increased after the legislation. The proportion of selected crimes committed with knives in these two jurisdictions during the pre- and post- legislation periods are shown in Figures II.9 and II.10. The only consistent findings relate to homicides and attempted murders, where the percentages

of these crimes with knives are greater after than before the legislation.

A comparison of the data on the relative use of knives (Figures II.9 and II.10), with the data on the relative use of firearms (Figures II.3 and II.4), shows an inverse

Figure 11.7

ONLY

Source: Summary statistics from local police departments

Figure II.8

Source: Summary statistics from local police departments

relationship between the use of firearms and knives. In both cities, the proportion of homicides and attempted murders committed with firearms decreased after the legislation, whereas the relative use of knives increased. Furthermore, with the exception of homicides in Vancouver (where knives were more frequent than firearms during both time periods), the comparison shows that a greater proportion of these crimes was committed with firearms than with knives prior to the legislation, and that the opposite was true during the period after the legislation.

In summary, these data indicate that the greater controls over firearms have resulted in a "displacement" effect, whereby greater proportions of several of the crimes

examined are being committed with other weapons.

B. THE CHARACTERISTICS OF FIREARM CRIMES

This section examines the characteristics of criminal incidents involving firearms. The section has four parts: the first examines the types of firearm used; the second, the different kinds of firearm incidents; the third describes the location of these incidents; and the fourth the characteristics of suspects involved in firearm crimes.

In addition to further analyses of the previously described national data on murder and the summary statistics from local police departments, this section reports on selected elements from police "occurrence reports" on incidents involving firearms. Detailed information on the characteristics of firearm incidents was obtained from the police occurrence reports in Vancouver, Calgary, Ottawa, Quebec City and selected R.C.M. Police detachments in Nova Scotia and Saskatchewan.⁵

The occurrence reports data cover only the period following the legislation, from 1979 to 1981 in the four cities, and for 1980 and 1981 in the two R.C.M. Police jurisdictions. Therefore, no before/after comparisons will be possible with the occurrence reports data (this was done with the summary statistics). The purpose of collecting the data from the occurrence reports was simply to provide detailed information on the characteristics of firearm incidents and on suspects so as to gain a better understanding of the nature of firearm crime since the legislation.

Wherever possible, uniformity of the occurrence reports data across the six sources was maintained. However, the types of incidents and data were not identical from jurisdiction to jurisdiction. Ottawa, Quebec City and the R.C.M. Police detachments included domestic incidents and suicides with firearms, but neither Vancouver nor Calgary did so. Calgary was unable to provide information on a suspect's previous criminal history. Information concerning previous mental history or drug or

alcohol use was available only from the two rural jurisdictions.

There also were differences in the internal coding procedures of each of the police departments, which means that each department may not necessarily have categorized offences in the same way. Therefore, comparisons from jurisdiction to jurisdiction should not be made.

In addition, data on suspects with criminal records were obtained from the Criminal History Data Base (F.P.S.), based on fingerprint report submissions made to the R.C.M. Police by all police departments in Canada. Selected elements from these records have provided the study with information on the criminal history and sentences imposed on individuals charged with indictable offences involving firearms (F.P.S. data are further described in the section on sentencing in Chapter IV). These data reflect the date a suspect was sentenced, while the occurrence report statistics refer to the date the offence was committed. Thus, time lags of up to a year or more are to be expected in looking for effects of the legislation in the F.P.S. data.

1. What Types Of Firearms Are Used In Crime?

The data presented in Part A of this chapter indicated that while the proportion of crimes committed with all firearms combined often showed a decline from the pre- to

Figure II.9
KNIVES AS A PERCENTAGE OF TOTAL OFFENCES
VANCOUVER

Source: Summary statistics from local police department

Figure II.10
KNIVES AS A PERCENTAGE OF TOTAL OFFENCES
TORONTO

Source: Summary statistics from local police department

the post- legislation periods, there was less evidence of a similar decline in the proportion of these crimes committed with handguns. These findings therefore indicate that the reduction in the relative use of firearms in crime after the legislation was primarily for other kinds of firearms, rather than for handguns. They also suggest that when firearms are used in crimes, the firearms are more likely to be handguns since the legislation went into effect.

Figures II.11 to II.16 show the use of handguns as a proportion of the selected crimes where some form of firearm was involved. With very few exceptions, these data show that the proportion of handgun use in crimes involving firearms has increased from the pre- to the post- legislation periods. Combined with the findings from the previous sections of this chapter, these data indicate that there has been a reduction in the use of other firearms since the legislation, although when some form of firearm was used, there was a greater likelihood since the legislation that it was a handgun.

More detailed information on the use of different kinds of firearms was obtained from the police occurrence reports for firearm offences after the legislation (see Table A1.8). These data indicate that robbery was the most frequent form of firearm incident in the four city jurisdictions. The type of firearm used most often in robbery was a handgun. The use of handguns in other crimes was far less prevalent. In the two rural jurisdictions combined, handguns were used in less than seven percent of all firearm-related incidents in 1980 and 1981. This was due partly to the fact that robberies with firearms were a relatively rare occurrence in these jurisdictions.

Rifles and shotguns were the most frequently used firearms in the other offences. This is particularly so in the rural jurisdictions, where over the period 1980 to 1981 an average of about 75 percent of the identified incidents involved rifles or shotguns.

2. What Kinds Of Firearm Offences Occur?

The percentage distribution of firearm offences from the occurrence report data are presented in Table A1.9. As previously noted, the most frequent firearm offences in the city jurisdictions were robberies. While considerable variation was found between jurisdictions for the other types of offences, it is worth noting that suicides represented a relatively large proportion of firearm incidents in the two rural jurisdictions.

3. Where Do Offences With Firearms Occur?

Information on the location of firearm offences was obtained from the occurrence reports (and from the Toronto Police Department), specifically whether the offences took place in a domicile, on a business premise, on the street, in a vehicle or in some other location. Table A1.10 sets out the percentage distributions of the location of selected offences in the seven case jurisdictons. Due to the small base numbers in the rural jurisdictions, the data from the Nova Scotia and Saskatchewan detachments were combined.

In each of the five city jurisdictions except Toronto, over 70 percent of firearm robberies occurred on business premises. No consistent patterns emerged over time, except perhaps for the percentage of firearm robberies of businesses, which rose in all jurisdictions between 1979 and 1980. The 1981 figures show percentages dropping in three jurisdictions, but all remained higher than the 1979 levels.

Four cities (Vancouver, Calgary, Ottawa and Quebec City) showed a decline between 1979 and 1980 in firearm offences occurring in the home, a trend which continued into 1981 in only Ottawa and Quebec City. No other consistent trends were noted.

The Characteristics Of Suspects Involved In Crimes With Firearms.

This subsection examines the age and sex of suspects charged with offences involving firearms. Suspects with histories of mental illness or under the influence of alcohol or drugs at the time of the firearm incident in the two rural jurisdictions also are

examined. A detailed analysis is included concerning whether suspects involved in criminal offences with firearms have previous criminal records, and if so, the nature of the records.

a. How Old Are The Suspects?

The percentage distribution of the ages of persons charged with firearm offences in the local jurisdictions is presented in Table A1.11. The typical age of suspects was from 16 to 24 for robbery offences, but increasingly tended to include older age groups for other offences.

No consistent change or trends were observed over the period from 1979 to 1981.

b. Are Most Suspects Males?

Over 90 percent of suspects charged with firearm offences in the local jurisdictions were males. No trends were noted in the sex of suspects over the period of the study.

c. To What Extent Are Suspects Under The Influence Of Alcohol Or Drugs, Or Had Histories Of Mental Illness?

In the two R.C.M. Police jurisdictions, information was acquired on whether suspects had histories of mental illness or were under the influence of alcohol or drugs at the time of the firearm incidents.

The data on previous mental illness reflect only such information as was within the knowledge of the investigating police officer. The numbers involved were very small. Of 146 suspects charged with criminal offences with a firearm in both jurisdictions over the two years 1980 and 1981, only one had a known history of previous mental illness. In the same period, another 77 persons were apprehended but not charged. Of these, 11 had histories of previous mental illness.

A startling phenomenon was observed in the percentage of suspects from both rural jurisdications who were under the influence of alcohol or drugs at the time of the incident. Of the 146 suspects charged during 1980 and 1981, the police records indicated that 94 (64.4%) were under the influence of alcohol or drugs at the time of the firearm incident. This relationship between alcohol and drug use and firearm misuse in the rural jurisdictions seems considerable. However, because of the lack of data from the urban jurisdictions, it was not possible to assess whether this degree of alcohol or drug involvement would be found in the urban centres.

d. To What Extent Do Suspects Have Previous Criminal Records?

This discussion uses the occurrence report data from Quebec City, Ottawa and Vancouver and the national F.P.S. data. The Calgary police department was unable to provide information on suspects' criminal records.

In general, no consistent trends were found over the years 1978 to 1981 in the percentage of suspects charged with offences involving firearms who had previous criminal charges or convictions. The number and percentage of suspects with previous records are found in Table A1.12. Nationally, in three of the four years examined, the percentage of suspects with previous records was about 55 percent. The exception was 1980, a year in which there was a rise to 63 percent. Different patterns emerged in the three cities. Quebec City showed a net gain, with a substantial drop for 1980 only; from 41.8 percent in 1979 to 33.3 percent in 1980, and up to 47.5 percent in 1981. Ottawa also showed a drop in 1980, with the 1981 figures reaching the 1979 levels of about 65 percent. Vancouver showed a continuing upward trend, to approximately 69 percent in 1981.

The number of previous charges in the F.P.S. records of the suspects with at least

one previous charge was examined (see Table A1.13). The data for 1978 to 1981 showed a gradual shift to suspects with increasing numbers of previous charges. The percentage of suspects with five or more previous charges increased over the four year period. These data suggest a trend toward criminals with less lengthy records becoming less likely to be charged with firearms offences.

The national and case jurisdiction data on the nature of prior criminal records also was examined. Table A1.14 shows that suspects involved in firearm offences were more likely to have prior records of violent offences than of firearm offences. Nationally, over 55 percent of suspects with previous records had prior records of violent offences, and slightly over one quarter had prior firearm charges and/or convictions. The percentage of suspects with criminal records who had records involving violent offences increased from 55 percent in 1978 to 59.7 percent in 1981. On the other hand, no consistent changes occurred with respect to the percentage of suspects with previous firearm offence records.

Table A1.15 presents data on the number of previous firearm charges and/or convictions for those suspects with prior records involving firearm offences. While these data show that many of these suspects had several previous firearm-related charges or convictions, no consistent trends were apparent during the four year period.

In order to assess further the severity of the prior criminal record, suspects with prior records that included jail terms were observed. Also examined was whether any single jail term was for a period of two years or more, which would mean a penitentiary term, a more detailed indication of the severity of the prior offences. (See Tables A1.16 and A1.17).

The national data from 1978 to 1981 show that approximately half of the suspects with criminal records had previously spent time in prison. While no trends over the four years were apparent from the national data, the data from Quebec City and Vancouver indicated that suspects involved in offences involving firearms who had prior criminal records tended to have previously spent increasingly longer periods in prison. No consistent overall pattern was found in the percentage of suspects who had previous penitentiary sentences. The percentages peaked in 1980 for the national figures (29.0 percent) and in Quebec City (46.2 percent). In the other two jurisdictions, downward trends were found over the three year period ending in 1981, particularly in Vancouver where the percentages dropped from 100 percent to 48.1 percent.

To summarize, nationally:

- Over 50 percent of suspects involved in firearms related crimes had previous criminal records. There have been no major trends in this figure over the period 1978 to 1981.
- Of those suspects who had criminal records, between 44 percent and 50 percent had been subject to five or more charges and this rate increased between 1978 and 1981.
- A slight increase was observed in the percentage of suspects with criminal records who had prior records involving violent offences, but no changes were observed in the percentage rate of suspects with previous firearm offence records.
- Between 23 percent and 29 percent of suspects with criminal records had been sentenced to at least one penitentiary term. No major changes over time were observed.

Chapter III

NON-CRIMINAL FIREARM INCIDENTS

This Chapter examines the use of firearms in non-criminal incidents, i.e., hunting accidents, other accidents and suicides. ¹⁰

A. FIREARMS ACCIDENTS

1. Has There Been Any Change In The Rate Of Accidents With Firearms?

A major goal of the 1978 legislation was to encourage the safe handling and storage of firearms. The implementation of the provisions relating to this goal is discussed in Chapter IV.

Vital Statistics data reveal that in each year since 1971, there have been less than 145 fatal firearms accidents in Canada. Between 1971 and 1980, fatal firearms accidents declined by 48 percent, from 144 to 75. The number and per capita rate of fatal firearm accidents, provincially and nationally, are displayed in Table A2.1. Figure III.1 illustrates the decline in the rate of fatal firearms accidents. These data show that although the decline began prior to the enactment of Bill C-51, the per capita rate of accidental deaths with firearms declined further after the legislation.

Data on fatal and non-fatal firearm accidents were obtained from the Hospital Morbidity Section of Statistics Canada. These data (see Table A2.2) were limited to different time periods, and were only available for some of the provinces. It was not possible to segregate the non-fatal from the fatal accidents. Though limited, these data combined with the information on fatal accidents from Vital Statistics, indicate that the rate of accidents with firearms has decreased since the legislation.

2. Has There Been Any Change In the Rate Of Hunting Accidents?

Data on hunting accidents (fatal and non-fatal) and hunting licences sold were available for six provinces (see Table A2.3). In each province there was a reduction over the years examined in the number of hunting accidents relative to the number of hunting licences issued. A summary of these data is shown in Figure III.2 where the rates over the provinces for which there were data were averaged (unweighted averages, omitting Newfoundland where there was only one year of data in the prelegislation period).

Figure III.2 shows a rather sharp decrease in the average rate of hunting accidents for these provinces from 1960 to 1972, a relatively stable rate from 1972 to 1977, and a decline from 1978 to 1981. As in the case of fatal firearm accidents presented in Figure III.1, the aggregate rates of hunting accidents indicate that while the decline began prior to the start of the legislation, the rates were lower during each year of the post-legislation period than they had been for any of the previous years for which data were available.

An additional question of interest was whether the provincial mandatory hunterfirearm safety programs have had any effect on the rate of hunting accidents. In three of the provinces where such safety programs have been initiated, the rates of hunting accidents in the four-year periods before and after the programs were examined. (The four-year periods were chosen to avoid the confounding effects of long-term trends.)

Figure III.1

FATAL FIREARMS ACCIDENTS
PER 100,000 POPULATION
NATIONAL 1971 — 1980

L = Start of amending legislation, January 1, 1978

The efficacy of the programs is evident in the fact that in each of the three provinces, the post-program average rates were lower than the pre-program rates. In Ontario, where hunter safety programs became mandatory in 1967, the average number of hunting accidents from 1963 to 1966 was 1.95 per 10,000 licences. From 1967 to 1970 the average was 1.75 per 10,000 licences. In New Brunswick the mandatory program was introduced in 1969. The average rate of accidents per 10,000 licences from 1966 to 1968 was 2.13 while the average rate from 1969 to 1972 was 1.18. British Columbia, which began a mandatory program in 1973, had an average rate of 1.32 from 1969 to 1972, while the average over the period 1973 to 1976 was 0.95 per 10,000 licences issued.

In summary, there has been a general decline in firearm accidents. This decline has been particularly noticeable in fatal firearms accidents. In addition to a general long-term decrease in rates, both provincial mandatory safety programs and the firearms control legislation were coincident with declines in accident rates.

B. FIREARMS SUICIDES

1. Has There Been Any Change In The Use Of Firearms In Suicides?

Suicides with firearms occur approximately ten times more frequently than do firearm accidents. The national and provincial data presented in this section were acquired from the Vital Statistics Section of Statistics Canada. Data for the period 1971 to 1980 for Calgary, Vancouver, and Ottawa also were obtained from Vital Statistics. Suicide data for Toronto from 1974 to 1981 were obtained from the Toronto Police Department. Finally it should be added that all data on firearms suicides include suicides by explosives.

The number and per capita rate of firearm suicides by province and nationally are presented in Table A2.4, and the proportion of total suicides nationally by firearms and other means in Table A2.5

The number and per capita rate of suicides have gradually increased from 1971 to 1978, followed by a decrease in 1979 and 1980. The same pattern was obtained with respect to the per capita rate of firearm suicides. Because of the similarity in these trends, the reduction in the per capita rate of firearm suicides in 1979 and 1980 may not be related to the legislation, but may reflect the fact that suicides in general declined in these two years compared to 1978. However, a clearer difference can be seen by examining the percentage of total suicides committed by firearms.

Suicides by firearms, hangings and drugs as a percentage of total suicides in Canada for the period from 1971 to 1980 are shown in Figure III.3. The use of knives (or more precisely, cutting or piercing instruments) has not been graphed because of the small numbers of such incidents. From 1971 to 1980, the number of suicides with knives increased from 44 to 58, but never constituted more than 1.7 percent of total suicides.

Figure III.3 indicates that there was a gradual upward trend from 1973 to 1977 in the percentage of suicides committed with firearms. However, this trend was reversed during the post-legislation period. The relative use of firearms in suicides was lower in 1979 and 1980 than it had been in any of the previous years for which data were available.

Figure III.3 also shows that firearms were the most frequently used means among the methods of suicides examined. In addition to the previously noted decrease in the relative use of firearms in suicides after the legislation, it can be seen that the proportion of suicides by drugs has also decreased during this period, while suicides by hangings have proportionally increased. Because the percentages of suicides by firearms and drugs have decreased, it is not possible to determine whether the increase in hangings was due to some form of displacement (e.g., due to greater controls over firearms).

Figure III.2

AVERAGE NUMBER OF HUNTING ACCIDENTS

PER 10,000 HUNTING LICENCES ISSUED IN SELECTED PROVINCES

L = Start of legislation, January 1, 1978

Source: Hunter/Firearm Safety Departments in Nova Scotia, New Brunswick, Ontario, Sas-katchewan and British Columbia (see Table A2.3)

The data on suicides by various means for Toronto, Ottawa, Calgary and Vancouver presented in Table A2.6 showed the same general pattern as the national data. Despite wide fluctuations (due to the smaller number of incidents), the percentage of suicides by firearms in all four cities was lower during the post-legislation period than before.

In view of the national data, it can be concluded that the relative use of firearms in suicides decreased after the enactment of the legislation. This is similar to the pattern of findings that was obtained with respect to firearm accidents.

Chapter IV

IMPLEMENTATION AND EFFECT OF LEGISLATIVE PROVISIONS

Firearms control in Canada consists of the set of provisions described in Appendix 4. This chapter examines the implementation, and where possible, the effects of the provisions which relate to screening, sentencing, prohibition, search and seizure, safe handling and storage, and the regulation of businesses.

A. SCREENING

The Criminal Code provisions governing firearms in Canada categorize firearms into three groups:

- prohibited weapons;
- restricted weapons; and
- -- other firearms (referred to in this report as unrestricted firearms).

The legislation explicitly defines prohibited and restricted weapons. Firearms which fall outside the legislative definitions are unrestricted. Possession of prohibited weapons by private individuals is barred absolutely. Restricted weapons are available only in specified circumstances, while unrestricted firearms are available with minimal conditions.

Depending on the circumstances, possession or acquisition of restricted weapons and unrestricted firearms requires one or more of seven types of certificates and permits: a Firearms Acquisition Certificate (FAC); a minor's permit; a registration certificate; a permit to convey; a carrying permit; a permit to transport; or a business permit.

Screening is the process by which it is determined whether an applicant meets the criteria attached to the particular certificate or permit. The purpose of the screening provisions is to prevent firearm misuse before the fact by preventing incompetent or dangerous persons from acquiring firearms.

This section is divided into four parts. The first part provides a brief general description of the screening procedures and criteria associated with the firearms certificates and permits. The remaining three parts examine the implementation and effect of FAC's, registration certificates and carrying permits.

Permits to transport and permits to convey are administrative types of permits and will not be discussed. Minors' permits are not discussed because they are relatively rare. The number of Minors' permits issued by province can be found in Table A3.1. Business permits will be discussed in the last section of this chapter.

The data sources consist of the Commissioner's annual report to the Solicitor General of Canada for the years 1978 to 1981, the Chief Provincial/Territorial Firearms Officers' (C.P.F.O.'s) monthly reports, and the Firearms Sections in the Vancouver, Calgary, Toronto and Ottawa Police Departments. ¹³ Qualitative conclusions based on interviews with firearms officers and registrars will be made where warranted.

1. Description

Figure A3.1 displays the relationship between the categories of weapons, the certificates and permits and the issuing authorities. The terms and conditions attached to each of the certificates and permits are set out in Figure A3.2.

The most notable characteristics of the screening process are:

- acquisition of an unrestricted firearm requires a FAC. This was one of the major innovations introduced by Bill C-51;
- acquisition of a restricted firearm requires a FAC and registration certificate.
 The imposition of more stringent prerequisites to the issuance of registration certificates was also an important aspect of Bill C-51.
- restricted weapons are also subject to permits to convey, transport, and carry.
- screening is conducted by police agencies or under the authority of provincial governments
- a FAC is valid throughout Canada for five years and can be used to acquire an unlimited number of firearms. However, each restricted firearm requires an individual certificate and the screening process must be repeated on each application.

2. Firearms Acquisition Certificates (FAC's)

a. Implementation

How Many FAC's Are Issued? Because FAC's are valid for five years, a decline in the number of FAC's issued was expected by 1981, the third year in which the FAC system was in effect. Nationally, the number of FAC's issued per 10,000 population declined from 104 in 1979 to 87 in 1980 and to 68 in 1981. Table A3.2 shows the number of FAC's issued nationally and Tables A3.4 to A3.7 the number issued locally.

Provincially, the highest number of FAC's issued over the three years 1979 to 1981, occurred in Ontario where an annual average of about 52,000 FAC's were issued over these three years. However, per 10,000 population, only Prince Edward Island issued fewer FAC's than Ontario. By 1981, Prince Edward Island issued 45 FAC's per 10,000 population while Ontario issued 48.

The highest numbers of FAC's issued (per 10,000 population) were in the Yukon and the Northwest Territories. In 1981 410 FAC's per 10,000 population were issued in the Yukon and 175 per 10,000 population in the Northwest Territories.

How Many FAC's Are Refused? In all three years, Ontario showed the highest rate of refusals per 1,000 FAC applications, ranging from six per 1,000 in 1979 to eight per 1,000 in 1981 (see Table A3.3). This rate was approximately twice that in Quebec. Yet, though the rate of refusal in Quebec increased from 1979 to 1981, its refusal rate of 4 per 1,000 in 1981 was comparable to several other provinces. It is not clear therefore that a correlation can be drawn between the refusal rates and the FAC issuance rates.

Furthermore, there is inconsistency in the actual recording of FAC refusals. The first report observed that a system of "pre-screening" was widespread. That is, "poor" candidates were discouraged from actually making a formal application. "Pre-screening" continues to be prevalent though its use varies from jurisdiction to jurisdiction. Therefore, comparing the number of recorded refusals from jurisdiction to jurisdiction may not be useful.

On the other hand, assuming that the factors determining whether the refusals are recorded or not remained relatively stable over the three years, nationally there was an increase over the three years in the percentage of applications refused; from 0.39 percent in 1979, to 0.52 percent in 1980 and 0.60 percent in 1981.

Data on the reasons for refusals were obtained from two provinces, Ontario and New Brunswick, and two cities, Toronto and Ottawa (see Table A3.8). These data indicate that most of the refusals were made on the basis of the applicant's criminal record.

How Many FAC Refusals Result In A Reference? Applicants refused a FAC are entitled to request a reference to a magistrate, essentially a form of appeal. In 1979, 6.6 percent of FAC refusals nationally resulted in a reference; in 1980 this increased to 7.6 percent and in 1981 to 7.8 percent. (See Table A3.3).

These low rates may be caused by informal deterrents to requesting a reference. Although the applicant is informed of the refusal and the right to a reference, he or she also is informed that an unsuccessful reference will result in a mandatory five-year prohibition order. As firearms officers have more cases to use as precedents, they are able to make more informed decisions about when refusals will be upheld. They are able to use this information either when deciding to make the initial refusal or when advising the applicant of the reference procedure. In any event, the low number of references makes it difficult to draw firm conclusions concerning trends.

Of the references which have occurred, nationally the percentage of refusals confirmed declined from 47 percent in 1979 to 45 percent in 1980, but increased to 57 percent in 1981. This increase also may be due to firearms officers acquiring greater experience in assessing when refusals will be upheld in court and making the decision to refuse accordingly.

The case law relating to references is quite limited and is focussed for the most part on the procedural aspects of the hearings. The limited provisions in the legislation governing references have led to some conflicting cases. *Unterreiner v. The Queen* (1979-80), 4 W.C.B. 216 (Ont. Co. Ct.) indicated that a magistrate could confirm or vary a firearms officer's opinion only on the basis of the evidence before the firearms officer. However, in *R. v. Kokoshki* (1980), 4 W.C.B. 472 (Ont. Prov. Ct.), it was held that the reference was in the nature of a trial *de novo* which meant further evidence could be adduced. In *R. v. Dhillon* (1982), 7 W.C.B. 131 (B.C. Co. Ct.), it was held that the reference resembled a "review" in which the court could hear evidence considered by the firearms officer and any additional evidence offered. The Court also held that the reference could consider questions of both law and fact and the level of proof was "on a balance of probability". It would appear that the lack of legislative guidance concerning procedural rules still leaves the conduct of some aspects of a reference open to question.

In summary, about eight percent of FAC refusals were appealed, and from 1979 to 1981, about 50 percent of these appeals were successful.

How Many FAC's Are Not Picked Up? In accordance with federal/provincial cost sharing arrangements, the police or justice unit responsible for administering the screening process is reimbursed for FAC's processed. This means that whether or not a FAC is picked up and paid for is a charge to the

system. The extent to which applicants are required to pay the \$10.00 FAC fee at the time of their application varies among provinces. The procedures used to process FAC applications in British Columbia, New Brunswick, and in some parts of Quebec for the most part require pre-payment, but do not in the other provinces.

Data on the extent to which FAC's were not picked up were acquired from five provinces. The number of uncollected FAC's as a percentage of total applications for 1980 and 1981 in these provinces was:

| | 1980 | 1981 |
|--------------|-------|--------|
| Newfoundland | 0.70% | 1.94% |
| Nova Scotia | 1.63% | 4.50% |
| Quebec | 2.30% | 2.19% |
| Ontario | 7.79% | 10.43% |
| Alberta | 5.48% | 11.36% |

With the exception of Quebec, the provinces showed increases in the percentage of FAC applications not picked up. Data on uncollected FAC's also were obtained from Toronto, Ottawa and Calgary for 1979 to 1981. The percentage of FAC applications not picked up in these cities was:

| | 1979 | 1980 | 1981 |
|---------|-------|-------|-------|
| Toronto | 17.0% | 12.8% | 14.8% |
| Ottawa | 5.6% | 16.7% | 16.6% |
| Calgary | 3.0% | 17.0% | 13.8% |

The percentage of uncollected FAC's was relatively stable in Toronto, and has substantially increased in Ottawa and Calgary. In all three cities, the percentage of uncollected FAC's in 1980 and 1981 remained quite high.

b. Effect

The assessment of whether the FAC system has been effective is limited. The best means of assessment would be to analyze the number of individuals with FAC's who subsequently became involved in firearm incidents. However, comprehensive data on whether individuals involved in firearm incidents had a FAC are not available.

Another method would be to examine whether the number of previously known criminals involved in firearm crimes declined after the implementation of the system. The hypothesis is that the FAC screening process should prevent persons with serious criminal records from legally obtaining firearms. This hypothesis probably is not valid for individuals with histories of violent crimes involving firearms since such persons in all likelihood would not acquire their firearms through legal channels. However, it may be valid for persons involved in minor offences, particularly if they relate to firearm usage or storage. In either case, as discussed in Chapter II, no major changes were noted in the proportions of accused with criminal records.

Finally, the effect of the FAC program can be inferred through an analysis of pre- and post-1978 use of firearms in criminal incidents. As observed in Chapter II, there does seem to have been a general reduction in the percentage of offences involving firearms. It is impossible, however, to determine to what extent the FAC program contributed to this downward trend.

3. Registration Certificates

a. Implementation

Screening for registration certificates is a two-step process. The first step involves a general check of the applicant, similar to that conducted on an FAC application. The second involves confirming that the applicant is eligible to possess a restricted weapon according to one of the six criteria set out in the legislation:

- for protection of life;
- for a lawful profession or occupation;
- for target practice at a club;
- for non-club related target practice;
- because the applicant is a bona fide collector; or
- because the firearm is a relic.

Although the initial processing of the application and the screening is conducted by the local registrar of firearms, the actual issuance of registration certificates is the responsibility of the Commissioner of the R.C.M. Police. The legislation stipulates that the Commissioner shall issue the certificate unless he has notice that it is not desirable in the interests of safety. The administration and processing of certificates on behalf of the Commissioner is carried out by the Firearms Registration and Administration Section of the R.C.M. Police (F.R.A.S.).

How Many Registration Certificates Are Issued? The month of November, 1978, was declared a firearms amnesty period, during which immunity was granted to persons submitting their weapons for disposal or registration. Over 40,000 firearms were submitted for the purpose of establishing or updating registration. The majority of these registrations were processed in 1979. It is within this context that data on registration certificates issued must be assessed. Figure IV.1 shows the number of registration certificates issued nationally (per 10,000 population). (See also Table A3.9).

Registration certificates are issued for newly registered restricted weapons and for the transfer of previously registered weapons to new owners. The rate of certificates issued for the purposes of transfers increased from 23 per 10,000 population in 1978 to about 36 per 10,000 in 1980. The higher rates from 1978 to 1980 probably are related to the amnesty program. Between 1980 and 1981 there was a sharp decline to 15 certificates per 10,000 people. Registration certificates issued for transfer purposes constituted between 70 and 90 percent of all certificates issued over the four years examined.

The number of first time registration certificates issued did not follow the downward slope seen in transfer certificates issued since 1980. As a result of the amnesty program, there was an increase in the rate of first time certificates issued between 1978 and 1979; from eight per 10,000 to 13 per 10,000. Between 1979 and 1980 there was a decline to three per 10,000. However, between 1980 and 1981, first time registrations increased to six per 10,000. Despite this increase, the rate of first time registrations in 1981 remained below the 1978 level.

In the four local jurisdictions, only Ottawa showed a decline in the rate of registration certificates recommended between 1980 and 1981 (see Figure IV.2). Certificates recommended in Toronto increased from five per 10,000 population in 1979 to 10 per 10,000 in 1981; in Vancouver from approximately

Figure IV.1

REGISTRATION CERTIFICATES ISSUED PER 10,000 POPULATION NATIONAL 1977 — 1981

L = Start of legislation, January 1, 1978

five per 10,000 in 1979 to eight per 10,000 in 1981; and in Calgary from about 20 per 10,000 in 1979 to approximately 27 per 10,000 in 1981.

By 1981 there were about 21 registration certificates issued for every 10,000 persons in Canada. ¹⁴ Toronto, Vancouver and Ottawa were below the national average, while Calgary was above it.

The data from the R.C.M. Police Firearms Registration and Administration Section (F.R.A.S.) do not identify registration certificates by type of certificate. The only sources of this information were the Chief Provincial/Territorial Firearms Officers' (C.P.F.O.'s) monthly reports (see Table A3.10). There are discrepancies between the total numbers as recorded in the C.P.F.O. reports and the numbers reported by F.R.A.S.. ¹⁵ Therefore, these data are used only to obtain a general idea of the distribution of certificates issued by criteria.

According to the C.P.F.O. data, about one-half of all certificates issued from 1979 to 1981 were issued for the purpose of target practice at a club and about 20 percent for the purpose of protection of life. This latter group usually is confined to occupations such as prospectors, geologists, etc.

How Many Certificates Are Refused Or Revoked? The decline in the number of registration certificates refused and revoked is striking.

| | 1978 | 1979 | 1980 | 1981 |
|-------------------------|-----------|----------|------|------|
| Refusals Revocations | 168 93 | 66 32 | 0 | 1 3 |

The large numbers of refusals and revocations in 1978 and 1979 likely were due to the amnesty period, and the 40,000-odd applications for certificates. The lower numbers in 1980 and 1981 may be due also to more rigorous prerequisites attached to registration certificates introduced by Bill C-51. Ineligible or inappropriate applicants now may be pre-screened so that such applications rarely reach the Commissioner. Finally, the lower refusal also may be a function of the fact that, as with FAC's, the local Firearms Sections may discourage unsuitable applicants from making a formal application.

b. Effect

The only available means of evaluating the effectiveness of the registration certificate screening procedures was to examine whether there had been any change in the extent to which handguns and other restricted weapons were involved in firearm incidents, such changes being concurrent with the introduction of the new criteria governing the issuance of registration certificates.

Direct information on whether restricted weapons used in firearm incidents were registered or not is not available. However, the use of handguns in various criminal incidents pre- and post-Bill C-51 was discussed in Chapter II. It was observed that overall, an increasing percentage of criminal offences with firearms involved handguns. However, it is questionable whether criminals contemplating violent crimes would attempt to acquire their handguns legally, and therefore the effectiveness or ineffectiveness of the registration certificate screening process cannot be inferred from these findings.

4. Carrying Permits

a. Implementation

The criteria for issuing carrying permits are analogous to those for registration certificates: protection of life; bona fide occupation; target practice at a club; and target practice generally. A registration certificate is required in order to obtain a carrying permit, although the issuance of a registration certificate does not necessarily mean that a carrying permit will be issued. In addition to the general background check, screening is conducted on whether a carrying permit is indeed required and the criteria met.

The most notable change in the carrying permit provisions was that the permit would no longer be issued for the purpose of protection of property.

How Many Carrying Permits Are Issued? Nationally, neither the absolute number nor the rate per 10,000 population of carrying permits issued over the years 1979 to 1981, showed any fluctuations of note (see Table A3.11). In each year, carrying permits were issued at a rate of about 12 per 10.000 population.

Nationally, the types of carrying permits also showed little change. On average, from 1979 to 1981, 75 percent of permits were issued for the purpose of target practice at a club and approximately 20 percent for purposes related to occupation (e.g., security guards). Very few were issued for the purpose of protection of life or for target practice other than at a club (an average of about two percent for each category over all three years).

Provincially, the highest rate of carrying permits issued was in British Columbia, where in all three years over 25 carrying permits per 10,000 population were issued. Over 88 percent of these were issued for the purposes of target practice at a club. The lowest rates of carrying permits issued were found in the Atlantic Provinces (an average of about three per 10,000 population from 1979 to 1981) and the two Territories (an average rate of about four per 10,000 population in 1980 and 1981).

Carrying permits issued per 10,000 population in the four case jurisdictions are illustrated in Figure IV.3 (also see Tables A3.4 to A3.7). Calgary issued the highest number of FAC's and registration certificates per 10,000 population. Ottawa issued the highest number of carrying permits per 10,000 population. The Ottawa data showed the highest rate of carrying permits issued although it was the only one of the local jurisdictions to show a decline between 1980 and 1981. In 1981, Ottawa and Calgary both issued approximately 17 carrying permits for every 10,000 persons.

The other notable trend occurred in Vancouver. The number of registration certificates issued in Vancouver per 10,000 population closely paralleled the upward trend seen in Calgary. However, Vancouver had the lowest rate of carrying permits issued per 10,000 population.

In Ottawa, the rate of carrying permit issuance probably is related to the diplomatic population in that a large percentage of carrying permits are issued to private security firms for the purpose of providing security to the various embassies. ¹⁶

How Many Carrying Permits Are Refused Or Revoked? Nationally, the percentage of carrying permit applications refused was very small, and declined over the years 1979 to 1981. In 1979, the percentage of applications refused

was 2.3, which declined to 1.5 percent in 1980 and further declined to 0.6 percent in 1981 (see Table A3.12). Only the Yukon, with an average refusal rate of 4.4 percent over 1979 to 1981, and Quebec, with an average of six percent, had a higher percentage rate of refusal. In any event, Quebec with a refusal rate declining from 8.6 percent in 1979 to 2.7 percent in 1981 also followed the national trend of declining refusal rates.

At the local level, only Toronto recorded any post-1979 refusals; none in 1980 and 14 in 1981. In Vancouver, Ottawa, and Calgary there was a combined total of only seven carrying permit refusals over the period 1979 to 1981.

Applicants for carrying permits must previously have been approved for both a FAC and a registration certificate. The vast majority of applicants require the permit for the purpose of target practice at a club. Such applicants probably are more aware of the provisions and administration of the firearm legislation than the general public. Accordingly, the declining rate in carrying permit refusals may be a function of better informed applicants who impose self-screening.

b. Effect

Aside from the fact that carrying permits are no longer available purely for the purpose of protection of property, Bill C-51 did not introduce any major modifications to the carrying permit screening procedures. Given that acquiring a registration certificate is a prerequisite to obtaining a carrying permit, any effect of carrying permit screening is linked to the effect of screening for registration certificates. The reader is therefore directed to the previous discussion on screening procedures for registration certificates.

To summarize the findings relating to the screening process as a whole, the rate of FAC applications refused increased from 1979 to 1981. In 1981, in all provinces except New Brunswick, less than one percent of FAC applications resulted in a formal refusal. At the same time, the refusal rates for registration certificates and carrying permits declined. This suggests that the screening process has its greatest impact at the time of the applicant's first introduction to the system. There are no meaningful data available to allow an assessment of the direct effectiveness of the screening process.

B. SENTENCING

A major thrust of Bill C-5I was to increase the severity of criminal law sanctions governing the misuse of firearms. The means used by the legislation were varied: new offences were created, the definitions of existing criminal offences were widened, and more severe penalties were provided for criminal misuse.¹⁷

This section consists of two sub-sections. In the first, the implementation of the sentencing provisions is examined by focussing on

- how often and under what circumstances the new penalties are being invoked for criminals who use firearms; and
- whether criminals who use firearms are receiving more severe penalties.

Particular attention is paid to the implementation of the offence of using a firearm while committing or attempting to commit an indictable offence, s.83. This is probably the most important of the new offences because it is subject to a *minimum* sentence. Thus:

 on a first offence, the accused is subject to imprisonment for a minimum of one year and a maximum of 14 years (providing there are no previous convictions for an indictable offence using a firearm); or

Figure IV.3

CARRYING PERMITS ISSUED PER 10,000 POPULATION FOUR CASE JURISDICTIONS 1979 — 1981

Source: Firearms Sections

— on a second or subsequent s.83 offence (or a first offence if the accused had been convicted prior to 1978 of an indictable offence using a firearm), the accused is subject to imprisonment for a minimum of three years and a maximum of 14 years.¹⁸

In the second sub-section, the effectiveness of the sentencing provisions is assessed by examining whether repeat criminal offences involving firearms are declining compared to first offences.

The analyses found in this section rely on data from three main sources: selected elements from the R.C.M. Police Criminal History records on persons charged with firearms offences; the occurrence report data from Vancouver, Ottawa and Quebec City; and selected elements from the records of persons charged with robbery using an offensive weapon in Vancouver over the years 1976 to 1981. Judicial decisions where relevant also will be discussed briefly.

The following is a more detailed description of the three main data bases:

R.C.M. Police Criminal History Records (F.P.S.): Fingerprint forms on persons charged with an indictable offence are submitted to the R.C.M. Police by police departments across Canada. The R.C.M. Police then assign a unique Fingerprint Section Number to the initial fingerprint report. This number is used to identify a particular file and individual. Further fingerprint forms or correspondence pertaining to an individual who already has been assigned an F.P.S. number then are placed in the file (see Note 7).

Using these records, the R.C.M. Police have provided selected information from the reports on persons charged with a firearms offence. This information is what the report refers to as the F.P.S. data. The data cover the period July 1, 1978 to the end of December 1981. The reader should note that:

- the date by which these data are described is the date of sentence, not the date of the occurrence of the incident or the date charges are laid; and
- the analyses record only up to six charges per suspect. 19

Occurrence Reports: The occurrence report data were described in some detail in the section on firearm crime characteristics in Chapter II. In the present section, the disposition information in the occurrence reports from Vancouver, Ottawa and Quebec City is used. As with the F.P.S. data, only up to six charges per suspect are analysed.²⁰ Unlike the F.P.S. data, however, the date of record for the occurrence report data is the date the incident occurred.²¹

Vancouver Robbery Data: The sentencing data from the F.P.S. and case jurisdictions were limited to offences involving firearms, and were further limited to the post-legislation period. However, a special study was conducted in Vancouver to examine sentences for all robberies with offensive weapons (excluding robbery with "bodily force" where firearms or other offensive weapons were not involved) for the years 1976 to 1981 in order to compare sentences for firearm and other offensive weapon robberies before and after the legislation.

1. Implementation

This sub-section examines the sentences over the period 1979 to 1981 imposed on suspects charged with firearms offences: the actual number of firearms charges laid, the disposition of these charges, the length of jail terms, whether jail terms were consecutive or concurrent, the relationship between s.83 and robbery charges, the sentences imposed on charges of robbery with an offensive weapon and finally, whether a previous criminal record had an impact on the current sentence.

a. Has There Been Any Change in the Number of Firearms Charges?

The first important measure observed was an increase in the number of firearms charges over the years 1979 to 1981. Nationally, the number increased between

1979 and 1980 and to a lesser extent between 1980 and 1981. This is illustrated below in Figure IV.4 (also see Table A3.13).

The increase from 1979 to 1980 was 1,470 charges, or 31.0 percent. The increase in the following year was 339 charges, or 5.4 percent. These data indicate an immediate, large increase after the enactment of the legislation, followed by a smaller increase in 1981.

b. Has There Been Any Change In The Disposition Of Firearms Charges?

This discussion examines the national totals of all firearms charges (Table A3.13), and the city data (Table A3.14).

Nationally, the percentage of charges resulting in a "no conviction" disposition showed no change over the three-year period, remaining at approximately 24 percent. Therefore, despite the large increase in the number of firearm charges immediately after the legislation (from 1979 to 1980, discussed in section a above), the fact that there was no corresponding increase in non-convictions indicates that the legislation did not lead to an increase in charges for which there was insufficient evidence for convictions (i.e., indiscriminate charging). The city jurisdiction data revealed substantial variability in the proportion of charges resulting in non-convictions, but no consistent increases were apparent from these data.

On the other hand, it was expected that the legislation would result in an increase in the severity of sentences for those convicted of firearm offences. The F.P.S. data indicated that 34.0 percent of those convicted of firearm offences in 1979 incurred jail terms. This percentage increased to 36.5 in 1980 and to 35.8 percent in 1981. In Vancouver, 19.2 percent of firearm offence convictions received a jail term in 1979; 45.6 percent did so in 1980, and 56.9 percent in 1981. For Ottawa, the percentage of convictions resulting in jail terms remained relatively constant (about 50 percent) for the three years. However, an anomalous pattern was found in Quebec City, where the corresponding percentages were 81.2, 41.7 and 54.5 percent. The number of cases in Quebec City was quite small, and it may be concluded that the severity of sentences (i.e., jail) for firearm offences increased in 1980 and 1981 as compared to 1979.

The sentencing for the use of a firearm in an indictable offence (s.83) was of special interest because this offence carries a minimum jail term of one year. In keeping with this mandatory provision, the national F.P.S. data indicated that over 90 percent of s.83 convictions resulted in jail terms in all three years, and that this percentage showed a slight increase over this time period (92.9 percent in 1979, 94.8 in 1980, and 96.4 in 1981).

To summarize, the percentage of total firearms convictions resulting in jail terms increased in 1980 and 1981 as compared to 1979. The mandatory s.83 jail term was implemented in most cases and the rate of implementation increased over the three years 1979 to 1981.

c. Has There Been Any Change In The Jail Terms Imposed For Firearms Offences?

In order to acquire a more detailed picture of the sentencing practices, the jail terms imposed for convictions for firearms offences were examined. The percentage of total firearms convictions resulting in jail, both nationally and in the aggregate of the three city jurisdictions, rose between 1979 and 1980. A similar pattern was found for the average length of jail terms for all firearms charges nationally. The detailed numbers and percentages are found in Tables A1.15 (national data) and A1.16 (case jurisdictions).

Figure IV.4

NUMBER OF FIREARMS CHARGES NATIONAL 1979 — 1981

The jail terms imposed for all firearms offence convictions combined were examined first. Section 83 convictions were excluded from this analysis because of the distorting effect of the minimum one year jail term which should accompany a s.83 conviction. Of the remaining convictions, nationally, the mean jail term in 1979 was 5.4 months. This rose to 6.8 months in 1980, and to 7.1 months in 1981. The pattern of increasing jail terms from 1979 to 1981 also can be seen by examining for each year the percentages of those receiving jail terms who were sentenced to one year or more; I5.5 in 1979, 19.1 in 1980, and 21.9 in 1981. The data in the city jurisdictions were too small to permit any general conclusions.

An examination of selected firearms offences also was conducted. The first offence examined was s.83, use of a firearm in an indictable offence, which carries a minimum one year jail term. As previously noted, there was a slight increase in the percentage of s.83 convictions resulting in jail terms. The percentage of these convictions incurring jail terms of one year or more also showed a modest increase over the period; 88.9 percent in 1979, 90.9 percent in 1980 and 93.2 percent in 1981. No consistent trends were observed in the average jail terms, which were 14.6 months in 1979, 13.6 months in 1980 and 13.9 in 1981. It is apparent however that if a s.83 conviction occurred, by and large the minimum jail term was enforced, and the small percentage of incidents where it was not enforced is declining.

The average jail sentence for pointing a firearm was five and one half months; for careless use, approximately five months; for possession of a weapon for a purpose dangerous to the public peace, between eight and nine months; for possession of a prohibited weapon, about seven months; and for possession of a restricted weapon, about seven months.

The average jail terms for convictions for both possession of a prohibited weapon and for possession of a restricted weapon increased noticeably over time. For the prohibited weapon offence it increased from 4.8 months in 1979 to 7.9 months in 1981; for possession of a restricted weapon the average term increased from 5.7 months in 1979 to 8.8 months in 1981.

The significance of this trend toward longer terms was tested by examining the percentage of sentences that were one year or greater in length. In both cases increases were observed. In the case of prohibited weapons, these percentages were 14.0 in 1979, 17.3 in 1980 and 23.1 in 1981. For restricted weapons, the corresponding percentages were 16.9, 23.0 and 29.5.

In conclusion, the courts have responded to the emphasis on more severe sentences by imposing longer jail terms upon convictions for firearms offences.

d. Has There Been Any Change In Consecutive Jail Terms?

Another indication of sentencing severity is whether multiple jail terms are concurrent or consecutive. The latter is the more severe sentence because terms are served one after the other, rather than simultaneously. The use of consecutive jail sentences is also of interest because it is mandatory that jail terms imposed pursuant to s.83 be consecutive to any accompanying jail terms.

Looking first at s.83 convictions, in those F.P.S. records showing at least one other current conviction with a jail term imposed, there was an increase in the percentage of cases in which consecutive jail terms were imposed: from about 82 percent in 1979 to approximately 87 percent in 1980 and 1981. Even given the mandatory nature of the s.83 jail term, 13 percent of s.83 jail terms accompanied by multiple jail sentences were *not* consecutive.

Of the remaining firearms charges, the percentage of multiple and consecutive jail terms was 14.5 percent in 1979 (representing 58 convictions), 14.8 percent in 1980 (87 convictions), and 17.1 percent in 1981 (105 convictions).

These increases showed the same pattern as terms for for prohibited and restricted weapons: an increase over the period, with the greater increase coming between 1980 and 1981. This suggests that there was a delay in the implementation of some of the sentencing provisions.

e. Are s.83 Charges Laid When Appropriate?

A robbery committed with a firearm is an indictable offence and accordingly should be accompanied by a s.83 charge (use of a firearm in an indictable offence). To ascertain the frequency of these charges, the relationship between the s.83 and robbery charges appearing in the data bases was analysed. These findings are displayed in Table IV.1.

The percentage of joint robbery and s.83 charges from the F.P.S. data base was very high—about 90 percent over the three years. There may be some inherent bias in the data base because to ascertain whether robberies were committed with a firearm, the F.P.S. data base was screened to include only robberies with an accompanying firearm charge of some sort (see Note 9). Accordingly, the occurrence report data from Vancouver, Ottawa and Quebec City probably provide a more accurate picture of the percentage of firearm robberies having joint s.83 charges, i.e., all occurrences of robberies with a firearm were noted, regardless of charges laid.

With the exception of Ottawa in 1981, less than 50 percent of the firearm robbery charges had an accompanying s.83 charge. This may have been because the prosecution was unable to prove a firearm was used, for example, no weapon was found or the instrument used did not fit the definition of a firearm. However, this latter example was one the study attempted to allow for, at least partly. In the analyses for Vancouver, Ottawa and Quebec City presented in Table IV.1, robberies committed with simulated weapons, air pistols or unknown types of firearms were excluded. In any event, two Ontario Court of Appeal decisions have held that an inoperable pellet gun is a firearm within the meaning of s.83; *R. v. Belair* (1981), 61 C.C.C. (2d) 461 and followed in *R. v. Bell et al.* (1982), 8 W.C.B. 95.

Notwithstanding the low incidence of joint s.83 and robbery charges, in each of the city jurisdictions the rate was higher in 1981 than in 1979. This was particularly so in Ottawa, which had a consistent increase from 30.4 percent in 1979 to 40.0 percent in 1980 and 51.5 percent in 1981. This trend can be seen more clearly if the data from the three cities are aggregated. The aggregate percentage of robbery charges accompanied by s.83 charges was 30.6 in 1979, 39.6 in 1980, and 47.1 in 1981. These increases may be due to the police, Crown Attorneys and judges becoming more familiar with the legislation over time.

Another facet of the s.83 charge and its use in appropriate circumstances related to the challenges to this section on the grounds that it was an abuse of judicial process. That is, the offence contravened an established principle of law that prevents multiple convictions for offences having identical essential elements (offences which arise out of the same occurrence). This issue has now been settled by the Supreme Court of Canada, which has held that in enacting s.83, Parliament expressly departed from this principle and that use of a firearm in the commission of an offence constitutes a separate offence under which separate and additional punishment can be imposed; McGuigan v. The Queen (1982), 66 C.C.C. (2d) 97.

Table IV.1

PERCENTAGE OF FIREARM ROBBERIES ACCOMPANIED BY s.83 CHARGES NATIONAL AND THREE CASE JURISDICTIONS 1979 — 1981

| | 7 | 0.4.0 | 1980 | 30 | 19 | 1981 |
|-------------|---------|-----------|---------|-----------|---------|-----------|
| | | 1919 | | | الم ١٧٥ | Darrant |
| | No of | Percent | No. of | Percent | NO. 01 | |
| | Charges | with s 83 | Charges | with s.83 | Charges | with s.83 |
| | 2000 | | | | | |
| National | 423 | 86.3 | 603 | 92.4 | 683 | 91.5 |
| Vancouver | 16 | 18.8 | 33 | 48.5 | 39 | 41.0 |
| Ottawa | 26 | 30.4 | 35 | 0.04 | 99 | 51.5 |
| Quebec City | 56 | 38.5 | 33 | 30.3 | 31 | 45.2 |

Firearm robberies in the three cities have been screened to include only robberies with handgun, rifle, shotgun, machine-gun or sub-machine gun.

Only one robbery charge with or without a s.83 charge analysed per record.

Sources: F.P.S. and Police Occurrence Reports

f. Does The S.83 Minimum Jail Term Have An Impact On Robbery Jail Terms?

The minimum one year jail term contained in s.83 may have been viewed by some members of the judiciary as an infringement of judicial discretion. In *R. v. Saint Amand* (1982), 7 W.C.B. 447, the trial judge stated that it was his policy to subtract the one year jail term from the jail term which he would have imposed on the robbery conviction if there had been no s.83 conviction. This policy was firmly rejected by the Ontario Court of Appeal as negating the purpose of the section.

In order to assess whether other judges have followed this policy without expressly stating so, the sentences imposed on convictions for robbery with a firearm accompanied and not accompanied by s.83 charges were examined. If judges compensated, less severe sentences would be expected for robberies with an accompanying s.83 charge than for those without. The analysis of the F.P.S. data base showed little support for this prediction. The percentage of robbery convictions with s.83 charges that resulted in jail terms was consistently higher than for robbery convictions without s.83 charges (see Table A3.17). However, there were no consistent differences between the two groups in the average length of jail terms for those who were sentenced to jail. As shown in Figure IV.5, the average jail term for those sentenced to jail was greater if there was an accompanying s.83 charge in 1979; it was less in 1980; and it was essentially identical in 1981. Therefore, while the average jail term for robbery convictions was greater in 1980. when there was no accompanying s.83 charge, the fact that a greater proportion were sentenced to jail if there was a s.83 during each year indicates that there was no systematic reduction in robbery sentences when accompanied by s.83 charges.

g. Are Robberies With Firearms Incurring Stricter Penalties Following The Legislation?

The national data presented in Figure IV.5 indicated that there was an increase from 1979 to 1981 in the average length of jail terms imposed upon conviction for robberies with firearms. In order to assess more fully whether more severe sent-ences for firearm robberies occurred coincident with the introduction of the new sentencing provisions in 1978, the dispositions of all robbery charges with offensive weapons in Vancouver were examined for the years 1976 to 1981.

Figure IV.6 presents a summary of the sentences imposed for robbery convictions involving firearms and for other offensive weapons before (1976-77) and after (1978-81) the legislation (also see Table A3.18). For firearm robbery convictions, there was a decrease in sentences of 2 to 5 years and an increase in sentences of five years or more after the legislation. The opposite pattern of findings occurred for robberies with other offensive weapons: there was an increase in the proportion of sentences of 2 to 5 years and a decrease in sentences of five years or more. For both groups, little change occurred with respect to the percentage sentenced to less than two years.

The Vancouver data indicate that persons convicted of robbery with firearms were given longer jail terms after the legislation than before. They also indicate that these longer sentences were not part of a trend to stricter sentences for all robberies, because sentences of five years or more decreased for robberies with other offensive weapons after the legislation. During both time periods, the findings also show that robberies with firearms were more likely to result in longer jail sentences than those committed with other offensive weapons.

h. Do Previous Criminal Records Have An Impact On The Dispositions And Sentences Incurred For Firearm Offences?

The disposition of firearm charges contained in the national F.P.S. data base was examined to determine if the presence of previous criminal records (see Note 8) was associated with the dispositions of the current firearm offences. Figure IV. 7 shows that persons with previous criminal records were more likely to be sentenced to jail for firearm offences than persons with no previous records (see Table A3.19).

In 1978, 37.7 percent of current firearms charges laid against suspects with previous criminal records resulted in convictions with jail dispositions. By 1981, the percentage had increased to 41.1 percent. The analogous percentages for suspects with no previous records ranged from 18.6 in 1978 to 23.5 by 1981. When only suspects who were convicted were aggregated over the four-year period, the differences between the two groups emerged even more clearly. For those with previous criminal records, 62.1 percent received a jail term on the current firearm convictions, while only 34.5 percent of those without previous records did so.

It is clear then, that suspects with previous criminal records were more likely to have been sentenced to jail on current firearms-related convictions.

Whether the kind of previous records had an impact on current dispositions was also examined. It was expected that a suspect with a record of violent or firearm offences would be more likely to incur a jail term. In both cases, this expectation was borne out. The numbers and percentages of the national data are found in Tables A3.20 and A3.21. These findings are illustrated in Figure IV. 8.

From 1979 to 1981, a consistent rate of about 60 percent of suspects with previous violent offence records received jail sentences on the current firearm convictions. The percentage of such suspects with previous firearms offence records who incurred current jail terms was slightly higher, about 65 percent.

To further assess the impact of a previous criminal record, the length of jail terms imposed was compared. Table IV. 2 compares the average jail term of accused with and without records involving previous firearms offences and or previous violent offences.

Over the four-year period, the mean jail sentence for those with previous firearms offence records was 11.1 months, compared to 7.9 months for those with no such previous records. For those with previous records involving violent offences, the mean jail sentence was 10.0 months, compared to 7.9 months for those without violent offence records. In both categories there was a slight increase in the average jail term over the four-year period.

The percentage of repeat firearms offence offenders receiving sentences of one year or more on the current firearms offences is shown in Figure IV. 9. This percentage increased from 28.2 percent in 1978 to 29.9 in 1979, to 30.5 percent in 1980, and sharply increased in 1981 to 35.4 percent.

To conclude, persons with criminal records convicted of current firearms offences are more likely to go to jail than those with no previous records. If those records were for violent or firearms offences, the length of jail terms will be longer. These findings indicate that courts are dealing with repeat firearm offenders with greater severity.

2. Effect

The intent of the sentencing provisions of Bill C-51 was to reduce firearms crimes by deterring both previous and potential firearm offenders. If the sentencing provisions

*Violent offence includes offences against persons and property, e.g., robbery, extortion, rape, break and enter 1978 data available only from July 1978

had an effect, a decline in firearms crimes generally would be expected and specifically, a decline in repeat firearm offenders.

As discussed previously, a direct cause and effect relationship among sentencing provisions, declines in firearm crime rates, and the number of previous offenders, cannot be drawn. Other factors such as the screening provisions may have contributed to such declines. In relation to the assessment of the number and percentage of previous offenders, it is not known when the previous offence was committed (before or after Bill C-51). Furthermore, a considerable time lag before deterrent measures have a full impact is expected. That is, it will take several years for the example of persons convicted under the new provisions to influence repeat and potential novice offenders. Thus it still may be premature to assess such an effect.

An assessment of whether crimes with firearms have been declining was described in Chapter II. Overall, the use of firearms in violent crimes declined subsequent to the legislation. Inferences cannot be made as to the extent to which the sentencing provisions contributed to such declines.

With respect to suspects with previous criminal records, it was hypothesized that if the sentencing provisons had a deterrent effect, it would more likely be felt by offenders with less serious records. It was concluded in Chapter II that there was an increase between 1978 and 1981 in suspects who had more serious criminal records. Percentage increases in suspects who had five or more prior criminal charges and in suspects who had at least one prior conviction for a violent offence were seen. These indices indicate that the population of firearm offenders increasingly is made up of serious criminal offenders. The hypothesis that the sentencing provisions would deter less serious offenders appears to be confirmed.

C. PROHIBITION

One of the interesting aspects of Bill C-51 was the emphasis on the concept of firearm prohibition orders; court orders preventing an individual from owning, possessing or having control of a firearm, ammunition or explosive substance for a specified number of years.

There are six prohibition categories:

- Mandatory Prohibition s.98(1) this shall be ordered upon conviction of certain criminal offences;²²
- Discretionary Prohibition s.98(2) this may be imposed at the discretion of the judge upon conviction of criminal offences not incurring a mandatory prohibition;²³
- Prohibition Contained in Probation Order s.663(2)(b) this can be included as a term of probation order;
- Pre-emptive Prohibition s.98(6) this order may be made by the magistrate on the application of a peace officer if "there are reasonable grounds to believe that it is not desirable in the interests of the safety of the person against whom the order of prohibition is sought or of any other person". The order can be for a term not exceeding five years;²⁴
- Prohibition Pursuant to FAC Reference s.98(7) if FAC refusal is confirmed on a FAC reference, i.e., appeal, the magistrate also shall prohibit the applicant from possessing any firearm, ammunition or explosive for a period of up to five years:
- Prohibition Pursuant to Search and Seizure Hearing s.101(6) this order may be made by the magistrate at the conclusion of a firearms s.101 search and seizure hearing, held in relation to an application for forfeiture of the firearms seized.

Figure IV.9

PERCENTAGE OF ACCUSED CONVICTED OF CURRENT FIREARMS OFFENCE AND HAVING PREVIOUS CRIMINAL RECORDS WHO INCUR JAIL TERM OF ONE YEAR OR MORE NATIONAL 1978 — 1981

The first three categories arise subsequent to a conviction for a criminal offence and are referred to in this report as *conviction prohibitions*. The latter three can occur in non-criminal situations and are referred to as *non-conviction prohibitions*. The mandatory s.98(1) prohibition, the pre-emptive s.98(6) prohibition, and the prohibition pursuant to a FAC reference all were introduced by Bill C-51.

The analyses of the use of conviction prohibitions use quantitative data from the F.P.S. data base and the occurrence reports from Vancouver, Ottawa and Quebec City. The data sources for assessing the implementation of non-conviction prohibitions are more varied. Reliance is placed mainly on quantitative data from the Firearms Sections of the Toronto, Ottawa, Calgary and Vancouver Police Departments, the Office of the Vancouver Crown Attorney, and the Commissioner's annual reports to the Solicitor General from 1979 to 1981.

1. Implementation Of Conviction Prohibitions

Section 98(1) of the Criminal Code includes the provision that a prohibition order shall be issued if a conviction for the offence of use of a firearm in an indictable offence (s.83) occurs. To assess the implementation of mandatory prohibitions, the extent to which s.83 convictions result in a prohibition is noted. The degree to which firearms charge convictions other than s.83 offences result in discretionary prohibitions is then examined.

a. Are Mandatory s.98(1) Prohibition Orders Enforced?

The short answer to this question is no. A s.83 conviction (use of a firearm in an indictable offence) should always be accompanied by a prohibition order. Therefore, the percentage of s.83 convictions which also resulted in a prohibition order was examined and from this the use of s.98(1) prohibitions generally was extrapolated.

Nationally, there was an increase in the percentage of s.83 convictions which incurred a prohibition order, but the percentages were very low; 11.3 in 1979, 13.2 in 1980 and 17.3 in 1981. In each year, more than 80 percent of s.83 convictions did *not* incur the mandatory prohibition order. (The complete numbers and percentages are found in Table A3.22).

Some variation was seen from province to province. The greatest increase in the use of the mandatory prohibitions occurred in Ontario, where s.83 convictions accompanied by a prohibition order increased from 10.2 percent in 1979 to 25.5 percent in 1981. The Prairie provinces showed an increase from 12.1 percent in 1979 to 20.0 percent in 1981. Quebec, which had the highest absolute number of s.83 convictions, remained below the national average in the enforcement of the mandatory prohibition in all three years, but there was a slight increase over the years: 9.3 percent in 1979, 11.8 percent in 1980 and 13.7 percent in 1981.

In summary, notwithstanding modest improvements, it is clear that enforcement of mandatory prohibition orders is very poor.

b. Has There Been Any Change In The Use Of Discretionary Prohibition Orders?

The use of discretionary prohibition orders was examined by observing the percentage of other firearm or weapon offence convictions which were accompanied by prohibitions (see Table A3.23). Discretionary prohibitions in this context refer to both s.98(2) and s.663(2)(b) orders.

No real difference nationally was observed in the use of mandatory and discretionary prohibitions. As noted in the previous section, mandatory prohibitions were used in 11 to 17 percent of appropriate cases over the years 1979 to 1981. Nationally, the percentage of other types of firearms convictions resulting in a

prohibition was about 16 percent over the years 1978, 1979 and 1981. A slightly higher rate of 18.5 percent was noted in 1980.

Provincially, the Atlantic provinces showed the greatest use of discretionary prohibitions, a prohibition order being issued in about one-third of non-s.83 firearm convictions. The use of discretionary prohibitions was lowest in Ontario and Quebec; an average of about 14.5 percent in Quebec and 13.2 percent in Ontario. These figures are below the national average of 16.4 percent.

Locally, Vancouver and Ottawa showed a much higher percentage use of discretionary prohibitions (see Table A3.24). In Vancouver an average of 43.5 percent of firearms convictions resulted in a prohibition. The figure for Ottawa was 28.4 percent. Vancouver had a marked increase in the percentage use of discretionary prohibitions; from 29.5 in 1979 to 62.7 in 1981, although the absolute numbers were quite small.

The percentage of prohibition orders issued upon conviction for selected offences nationally was examined. These findings are illustrated in Figure IV. 10 (based on data contained in Tables A3.22, A3.23, and A3.25).

Pointing a firearm was the offence most likely to result in a prohibition order. An average of 30.7 percent of such convictions resulted in a prohibition over the years 1979 to 1981. This was followed closely by *careless use* convictions with an average of 29.3 percent. The percentage use of prohibitions for the remaining firearms offences was 16 percent or less.

It is more difficult to assess the relatively infrequent use of discretionary prohibitions than it is with mandatory prohibitions, because many convictions may not warrant prohibitions. The perception of prohibitions as a punishment rather than a preventive measure may also be a factor. Finally, a procedural factor which may be relevant should be noted. In the case of *R. v. MacCallum* (1982), 7 W.C.B. 337 (N.B.Q.B.), it was held that a prohibition order which failed to specify a time period for the accused to dispose of previously lawfully acquired firearms was invalid and unenforceable.

In summary, offences involving actual misuse of firearms, such as pointing and careless use, resulted in prohibition more often than more "passive" offences, e.g., possession of restricted firearms without a certificate. For all offences, however, the use of prohibition orders appears to have been somewhat restrained.

To conclude, the enforcement of the mandatory prohibition upon a s.83 conviction is very poor. It may be that many Crown Attorneys and judges are unaware of the mandatory provisions of s.98(1). This may be due to the drafting of the legislation, in that s.83 does not cross reference the mandatory prohibition. Alternatively, the reason for the low percentage use of conviction prohibitions may be that because the accused is incurring a criminal sentence which may include a jail term, the courts believe that prohibition orders are redundant. That is, an offence already has been committed, the individual is receiving punishment, and a prohibition order may not be seen as necessary.

2. Implementation Of Non-Conviction Prohibitions

a. To What Extent Are Pre-emptive Prohibition Orders Used?

Pre-emptive prohibitions found in s.98(6) were introduced by Bill C-51. The section is used most often in situations involving recurring domestic or neighbourhood confrontations or unsafe storage habits. Discussions with Crown Attorneys, firearms officers and liaising police officers indicated that there was general agreement that the provision can be useful.

Robbery Assault Possession of Weapon for Dangerous Purpose PERCENTAGE OF SELECTED CONVICTIONS INCURRING PROHIBITION NATIONAL 1979 — 1981 Non s.83 Firearm Convictions Use of Firearm in Indictable Offence Careless Use Pointing Firearm Source FPS 00 77 20 36 32 30

Figure IV.10

However, there are some indications that, where possible, it is preferred to use the s.101(6) search and seizure procedure when making an application for a prohibition order. There appear to be two main reasons. First, there is a perception that judges feel more at ease ordering prohibitions pursuant to a search and seizure than to a unilateral application to prohibit possession of firearms. Second, procedurally s.98(6) does not make any provision for the disposal of firearms already in the individual's possession whereas such provision is found in s.101(6).

The *Criminal Code* makes no explicit provision for the procedures governing the conduct of the hearings. Case law is still limited, though in *R. v. Linder* (1980-81), 5 W.C.B. 86 (Ont. Prov. Ct.), it was held that the ordinary rules of evidence still applied and hearsay evidence could not be used.

Data on the use of s.98(6) and other non-conviction prohibitions were obtained in Toronto, Ottawa, Calgary and Vancouver (see Table A3.26). The number of such prohibitions recorded was quite small. There would therefore appear to be some reluctance to use the pre-emptive orders if the search and seizure provision can be used. However, s.98(6) would appear to be useful in circumstances where the search and seizure procedure has no application, e.g., where the person is not currently in possession of a firearm.

b. Are Mandatory Prohibitions Pursuant To A FAC Reference Enforced?

A FAC reference essentially is an appeal from a firearms officer's decision not to issue a FAC. As was noted in the section on screening, the number of FAC references was very small, as was the absolute number of s.98(7) prohibitions (see Table A3.26).

When FAC references occur, the implementation of the mandatory terms of s.98(7), that is, the imposition of a prohibition when a FAC refusal is confirmed, appears to be quite high. This probably is because the firearms officer or registrar was present at the reference and was able to point out the mandatory provisions of the section to the Crown Attorney. Alternatively, in many jurisdictions one Crown Attorney is responsible for all firearm-related hearings and therefore is familiar with the legislation.

In Toronto, Calgary and Vancouver, all of the 10 FAC refusals which resulted in a reference and were confirmed, also resulted in a prohibition order. Of the three FAC references recorded in Ottawa over the years 1979 to 1981, two had had hearings as of the date of the preparation of this report, both had been confirmed and one had resulted in a prohibition order. Nationally, the number of FAC refusals confirmed from 1979 to 1981 closely corresponded to the number of s.98(7) prohibitions.

In summary, the implementation of mandatory prohibition orders pursuant to a FAC reference is very good.

c. To What Extent Are Prohibition Orders Used Subsequent To Searches And Seizures?

A search and seizure hearing pursuant to s.101 is held if an application is made for the forfeiture of any firearms seized by the police under the section. If the order for forfeiture is made, the magistrate also may order a prohibition.

Although the absolute number of such prohibitions is very small, prohibitions issued after a firearms search and seizure hearing are the most commonly used of the three non-conviction orders. Toronto recorded the highest number of s.101(6) prohibitions; a total of 93 over the three years 1979 to 1981. In Toronto and Vancouver in the years for which data were available, 100 percent of orders for

firearms forfeiture following a search and seizure hearing also resulted in a prohibition order. In Calgary, 12 of 14 forfeiture orders in 1979 and the first half of 1980 were accompanied by prohibitions.

It is apparent that if the circumstances warrant an order for forfeiture of firearms, then for most magistrates, the circumstances also justify a prohibition order.

3. Effect Of Prohibitions

Probably the only means of directly assessing the effect of prohibition orders would be to observe to what extent individuals subject to a prohibition order subsequently were involved in an incident with a firearm.

There are no meaningful data available in this area. Some indication was provided by the number of charges of breach of a prohibition order. A total of 112 breach of prohibition order charges in the three years 1979 to 1981 were found nationally; 20 in 1979, 36 in 1980 and 56 in 1981. These numbers were too small to enable any conclusions to be drawn regarding the effect of prohibition orders.

D. SEARCH AND SEIZURE

The *Criminal Code* contains four categories of search and seizure relating exclusively to firearms and other offensive weapons. These are:

- Search and seizure without a warrant when a police officer believes on reasonable grounds that an offence in relation to a prohibited or restricted weapon, firearm or ammunition is or has been committed (s.99).
- Seizure without a warrant of a restricted weapon if the possessor is unable to immediately produce a registration certificate; of a firearm if the possessor is under 16 and does not immediately produce a permit; or of any prohibited weapon (s.100).
- Search and seizure with a warrant when there are reasonable grounds to believe "that it is not desirable in the interests of the safety of that person, or any other person" that the individual should have possession of any firearm, offensive weapon, ammunition, or explosive substance, s.101(1).
- Search and seizure without a warrant on the same grounds as s.101(1), when
 there are also reasonable grounds for believing "that the danger to the safety of
 that person or other persons is such that to proceed by way of an application under
 ss.(1) would be impracticable", s.101(2). This provision was introduced by Bill
 C-51.

Sections 99 and 100, authorizing search and seizure without a warrant, relate to cases of actual breaches of Criminal Code provisions. On the other hand, s.101(2) authorizes search and seizure without a warrant in circumstances of perceived danger where no criminal offence has yet occurred. As a safeguard, there is a requirement that following any search pursuant to s.101, with or without a warrant, the Attorney General immediately shall make a return to a magistrate showing the grounds upon which the search was conducted. This procedure, in theory, should allow the courts to monitor the circumstances of such searches.

Comprehensive data on firearm searches and seizures were not available. Most police departments do not keep centralized records of firearms searches and seizures, particularly if no firearms are seized. What data were available related to actual applications for forfeiture of firearms seized subsequent to a search. Some limited data on forfeiture applications were collected from the police departments in Toronto and Calgary and from the Vancouver Crown Attorney's office. The conclusions in this section are based partly on these data and partly on information acquired in discussions with police officers regarding the use of s.101(2).

1. Implementation

a. Under What Circumstances And How Often Are s.101 Searches And/Or Seizures Made?

The intent of s. 101 is to allow police officers to intervene in situations of perceived danger such as potential suicides, domestic confrontations, neighbourhood disputes, etc. In discussions with police officers, the general position has been that the use of the section is restricted to such circumstances. No data were available on the frequency of firearms searches and seizures either with or without a warrant. Therefore, no statements can be made about the actual circumstances of s.101 searches and seizures, particularly those conducted without a warrant.

A comment should be made here on the case of *R. v. Colet* (1981), 57 C.C.C. (2d) 105. Prior to Bill C-51, the predecessor to s.101(1) only permitted seizure. The *Colet* case turned on whether the previous section also authorized a search. Although the section has now been amended to provide expressly for both search and seizure, the case is of interest because it provides an indication of the attitude of the courts to searches and seizures in the circumstances provided by s.101, i.e., when no criminal offence necessarily has been committed. The British Columbia Court of Appeal held that the section permitted search as well as seizure. The Court held that the legislation was in the public interest and this interest was paramount to the rights of the individual. The Supreme Court of Canada reversed the Court of Appeal decision, *Colet v. The Queen*, (1981), 1 S.C.C. 2. The Supreme Court held that any statutory provision which encroached on the common law rights of property owners would be strictly interpreted in favour of the property owner. Since the previous section did not provide explicity for search, this right could not be inferred.

Notwithstanding the amendments to s.101 contained in Bill C-51, this case is probably an indication of the strictness with which courts may interpret "in the interests of safety".

b. To What Extent Is The "Return" Procedure Used?

Pursuant to the provisions of s.101(3), a return to the magistrate should occur subsequent to all s.101 searches, with or without a warrant and whether or not a seizure was made. The requirement for a return is not new but given the new provision in s.101(2) for searches without a warrant, the procedure has greater import as a device designed to prevent abuse.

The police departments interviewed indicated that returns were made only if a seizure had occurred and a request for forfeiture was intended. If returns were made only where the evidence was sufficient to support a forfeiture application, any protection afforded by the return procedure was redundant.

Non-compliance with the return procedures appears to be widespread. In some cases the police or Crown Attorneys are unaware of the requirement for a return. In other cases, the requirement is interpreted to apply only to searches without a warrant if an article is seized and an application for forfeiture is to be made.

Part of the reason for the non-compliance with the return procedure may be due to lack of procedural guidelines concerning how the return is to be made. The section provides that the return be made by the Attorney General, not the police officer, but further elaboration is not given. In addition, there apears to be confusion on the part of some police officers and Crown Attorneys between the return procedure and the procedure for an actual application for firearm forfeiture as set out in s.101(4).

To conclude, if the return procedure is meant to be followed in *all* instances of a s.101 search for a firearm, regardless of whether a weapon is seized or not, then compliance with this procedure appears to be poor.

c. To What Extent Are Search And Seizure Hearings Used?

If weapons are seized and forfeiture desired, an application to a magistrate for disposition must be made within 30 days of the seizure. The magistrate will then set a date for hearing the application.

In Toronto, there were 35 such hearings in 1979, of which 31 resulted in forfeiture. In 1980 there were 33 hearings, with 26 orders for forfeiture, and in 1981 there were 19 hearings with 16 forfeiture orders. In Vancouver, from December 1, 1979 to the end of December, 1980, there were 20 hearings and 16 forfeitures granted. In 1981, there were 11 hearings and seven forfeiture orders. Data were available from Calgary only up to mid-1980. There were six forfeiture applications in 1979, all of which were confirmed, and ten hearings between January and June, 1980, of which eight were confirmed. The number of hearings may not reflect the original number of applications. In some instances applications were initiated but not completed.

As with the return procedure, the procedural rules of conduct of these hearings are sketchy. Two early cases set out some basic rules of conduct for the hearings, including the fact that hearsay evidence was admissible. ²⁶ However, these were decisions of lower courts which are not necessarily binding on other courts. It appears that magistrates differ about whether hearsay evidence is admissible. Other issues which have arisen concern the fact that no provision is made for the hearings to be held *ex parte*, i.e., without the presence of the respondent, or for enforcement of the notice of hearing. Thus if the respondent does not appear at the hearing it is unclear whether the hearing can be held.

Notwithstanding the procedural difficulties, in the larger centres, lines of communication have evolved between police officers and Crown Attorneys and the application procedure runs with some smoothness. Furthermore, given the high percentage rate of forfeiture applications granted, and the concurrent prohibition orders issued (as discussed in the previous section) the concept of prevention behind such hearings appears to be well recognized by the courts.

2. Effect

The only practical measure of the effect of the search and seizure procedures is whether domestic or neighbourhood incidents with firearms have declined. It was observed in Chapter II that firearms incidents in domiciles declined between 1979 and 1980 but only in Ottawa and Quebec City did the decline continue in 1981. It is difficult to assess these findings in relation to the search and seizure procedures.

E. SAFE HANDLING AND STORAGE

Bill C-51 introduced a variety of measures designed to promote responsible and safe handling of firearms. These measures apply over a broad spectrum of individuals and institutions. Firearms businesses are controlled through screening for business permits and through regulations passed by the Governor in Council concerning a wide range of business activities related to the firearms. Individual firearms owners also are subject to a variety of controls, one of the most important being that "careless use" of a firearm is a criminal offence. Previously the level of misuse required to constitute a criminal offence was "dangerous" use; terminology encompassing a much narrower range of conduct.

Bill C-51 provided for two further means of encouraging safe handling and storage of weapons, both of which require a level of co-operation with provincial authorities. Section 105 provides that upon the application of a provincial Attorney General, a hunting licence or certificate, etc., issued by the province could constitute an alternative to a FAC. The section has been proclaimed but at the time of the preparation of this report has not been invoked by any province.

Section 104(2)(c) provides that a further requisite to acquiring a FAC be production of evidence of completion of a firearms safety course, or test, approved for these purposes by the Attorney General. This section is unproclaimed and inoperative at this time. Both of these sections anticipate some sort of interaction with the provincial

hunter safety programs.

Implementation 1.

To What Extent Are Safe Handling And Storage Practices Implemented By a. **Businesses?**

Firearms businesses now require permits which must be renewed annually. The storage and security procedures of such businesses are monitored either through a provincial system of business inspectors or through local police departments. Annual inspections are conducted prior to permit renewal and ad hoc inspections may be carried out during the year. As a result, the level of safe handling and storage practices exercised by businesses is probably quite high.

To What Extent Are Safe Handling And Storage Practices Implemented By Individuals?

It is difficult to assess the implementation of safe handling and storage provisions by individual firearm owners. Some criminal cases indicated the kinds of handling and storage practices considered by the courts to be "careless use" were described in the first progress report. The following cases provide further details:

In R. v. Wright (1980), 4 W.C.B. 506 (Sask, Prov. Ct.), the storage of a firearm in an unlocked gun rack in the bedroom of children was held to constitute storage of a firearm in a careless manner. The storage of a loaded shotgun in full view in a room to which people were invited from time to time also was held to be a failure to exercise due care, in R. v. Cousins (1980-81), 5 W.C.B. 508 (Ont. Co. Ct.).

The intentional discharge of a firearm at a hunter with the intent of scaring though not injuring, was held to be careless use by the British Columbia Court of Appeal in R. v. Zimmer (1981), 60 C.C.C (2d) 190. On the other hand, the accidental shooting of a woman by a hunter in an isolated area was not careless handling of a firearm. In R. v. Wolter (1980-81), 5 W.C.B. 236 (Ont. Dis. Ct.), the court held that a high degree of carelessness was required to sustain a conviction, not just simple lack of care.

2. Effect

If firearms are stored in safer and more secure environments in firearms businesses and by individual owners, then the number of firearms lost, stolen or missing should be reduced. No accurate data were available to measure this phenomenon.

Another means of assessing the effect of the safe handling and storage provisions is by examining the number of criminal charges laid in relation to unsafe practices and how the courts dealt with these charges.

However, with the exception of the offence of careless use, the number of charges under the remaining individual sections governing safe handling and storage, e.g., breach of a permit condition, was not large enough to make analyses worthwhile. This discussion therefore centres on charges of careless use.

Nationally, the F.P.S. data base indicate that the number of careless use charges increased from 898 to 992 between 1979 and 1980 but remained stable at 993 charges in 1981. These charges constituted about 16.7 percent of total firearm charges from 1979 to 1981.

As discussed in the previous section on sentencing, there was a slight increase in the percentage of careless use charges resulting in a conviction between 1980 and 1981. On the other hand, between 1980 and 1981 there was a decline in the percentage of convicted suspects who incurred jail sentences. Careless use convictions were the least likely of the individual firearm offences examined to result in jail terms. Only about 20 percent of such convictions incurred jail sentences from 1979 to 1981. This would indicate that many courts take the view that the conviction is sufficient to encourage safe handling practices. Careless use convictions were the most likely of the firearm offences to incur prohibition orders, although less than 35 percent of such convictions incurred prohibition.

There is no direct evidence that the safe handling and storage provisions have had an effect. However, the number of careless use charges probably were a reflection of greater enforcement on the part of police and Crowns. Notwithstanding the low percentage of convictions resulting in jail terms, the higher conviction and prohibition rates indicate that the courts were responding to the new emphasis on the promotion of saie handling of firearms.

F. THE REGULATION OF BUSINESSES

A major objective of Bill C-51 was to reduce access to firearms by dangerous and irresponsible users. One of the means of achieving this was through the regulation of firearms businesses.

As of January 1, 1979, businesses dealing in firearms or restricted weapons are required to obtain a permit. Records of all firearms related transactions and inventory are now required. The advertising and mail order sales of firearms are regulated and controls are imposed on businesses transporting or shipping firearms.

Business permits must be renewed annually. Since renewal requires an inspection, each business is inspected by provincial business inspectors or local police officers, at least once a year. The specific criteria for the initial issuance of permits and guidelines are a matter of provincial policy. There is substantial uniformity in screening procedures from province to province, centred on whether the owner had a criminal record and the existing security measures found on the premises.

This section concentrates on the number of business permits that have been issued. The data consists of the business permit figures found in the C.P.F.O. monthly reports and the Commissioner's annual reports to the Solicitor General.

1. Implementation

a. Has There Been Any Change In The Number Of Business Permits Issued?

The number of business permits issued by type of permit from 1979 to 1981 are set out in Table IV.3. It appears that there was a dramatic decline in business permits issued between 1979 and 1981. However, the number of permits issued in 1979 does not reflect the number of businesses. That was the first year the permit system was implemented and in order to facilitate inspection scheduling, many provinces introduced a staggered system for that year, issuing permits for 3 months, 6 months and 12 months. Consequently, there was no bench mark to measure the number of firearms businesses in 1979. By the beginning of 1980 the annual renewal system was in effect and the permit numbers for 1980 and 1981 provided a more accurate indication of the number of firearms businesses. However, the number of firearms businesses was somewhat lower than the number of

permits issued, because permits also were issued for temporary exhibitions and gun shows.

Nationally, the number of retail business permits issued for the purpose of selling unrestricted firearms remained quite stable in 1980 and 1981, at slightly over 5,000 permits per year. Provincially, New Brunswick, Saskatchewan and Alberta each showed an increase of over 30 percent in these permits issued between 1980 and 1981. Manitoba, however, had a percentage decline of over 30 percent. Indeed, the number of retail business permits issued in relation to restricted firearms remained stable or increased between 1980 and 1981 in all provinces except Manitoba. Nationally, the number of permits for wholesalers, manufacturers and gunsmiths all increased between 1980 and 1981.

b. To What Extent Are Business Permits Refused?

The number of recorded business permit refusals and revocations was very low. Nationally, there were 11 refusals in 1979, 2 in 1980, and 4 in 1981. There were 7 revocations in 1979, 6 in 1980, and one in 1981.

The legislation does not expressly provide criteria for issuing a business permit. Case law is therefore of some interest.

R. v. Wilke (1981), 60 C.C.C. (2d) 108 (Ont. Dist. Ct.) was an appeal by the Crown from a magistrate's order reversing a business permit refusal. The applicant had been refused a permit for business purposes on the grounds that her husband previously had been convicted of a firearms offence and would be involved in the business. No prohibition order had been issued against the husband and both the husband and wife had been issued a FAC. The Court held that although the business permit sections did not set out explicit criteria for the issuance of the permit, the criteria for a FAC did provide some of the factors to be considered. As the Court found no evidence that the applicant would fail to comply with those requirements it held that the refusal was unwarranted and confirmed the magistrate's order to issue the permit.

The small number of refusals and revocations would indicate that issuing authorities rarely utilize the refusal procedure. This may be because of good compliance with the business regulations. However, as the *Wilke* case demonstrates, if refusals do occur, the courts will require a high level of justification for such refusals.

2. What Are The Effects Of The Firearms Business Regulations?

The objective of the business regulation provisions is to reduce access by dangerous and irresponsible users. However, the regulation of businesses may have had an indirect impact on the number and profitability of firearms businesses. The administrative costs of the new security and record keeping requirements might have been a burden which some businesses could not meet. The C.P.F.O.'s and business inspectors interviewed indicated that the larger firearms businesses were generally unaffected because they always have maintained good security and accurate records. It was anticipated that some smaller businesses, carrying a few firearms as a sideline, may have discontinued carrying firearms in their inventory. There were no comprehensive data available which would enable a full assessment of this effect, but there were no marked declines in the number of firearms businesses remained stable.

Did the effect of Bill C-51 reduce the number of firearm sales? Data on unit and dollar sales of firearms presented in the first report indicated a decline in sales in 1979. This had to be seen in the context of a sharp increase in sales in 1978 which was probably a result of heavy consumer buying prior to the implementation of the FAC system on January 1, 1979. Very limited post-1979 data were available for the study.

and comments on the subsequent effect on the sales of firearm businesses are not possible.

In summary, due to limited data, comments on the effect of business regulations cannot be made, except to state that the number of retail business permits appears constant.

Chapter V

CONCLUSIONS

This chapter summarizes the principal findings of the study and concludes with brief recommendations regarding some of the legislative processes.

However, it has not been possible to control for the impact of variables other than Bill C-51 on the outcome measures, for example, crimes, accidents, and suicides with firearms. In addition, it has not been possible to determine strict causality, that is that the gun control provisions contained in the *Criminal Law Amendment Act*, 1977, have caused changes in firearms incidents.

Nevertheless, fairly consistent changes in the rates of various types of firearms incidents and sentencing patterns occurred subsequent to the implementation of the legislation. The large number of changes coincident with the implementation of the firearms control provisions found in the *Criminal Law Amendment Act*, 1977, lead to the conclusion that the legislation did have a moderate impact on the use of firearms and the processes by which the means of firearm control were implemented.

The principal findings of this study are:

A. THE OUTCOMES

 The relative use of firearms in most violent crimes declined in the post-legislation period.

The general trend has been for a modest but consistent decline in the proportion of most crimes committed with firearms since the introduction of the legislation. The national murder statistics show that while the relative use of firearms began to decline in 1975, their use has further declined since the start of the legislation in 1978. In fact, during each year since 1978, the use of firearms in murder has remained lower than it had been since 1962.

The national robbery statistics also indicate a decline in the proportion committed with firearms since 1978. With few exceptions (e.g., robbery in Ottawa), the data from the local city jurisdictions also show that a decrease has occurred in the proportionate use of firearms for most of the other criminal incidents examined.

2. Where firearms are used in violent crime, there is an increasing trend for the firearm to be a handgun.

While the proportion of crime committed with all firearms combined generally declined from the pre- to the post- legislation period, there is less evidence of a similar decline in the use of handguns. As a result, when firearms are used, the firearm is more likely to be a handgun since the legislation. These findings indicate that the greatest impact of the legislation has been on unrestricted firearms, e.g., rifles and shotguns.

There has been a moderate displacement of firearms by other weapons in robberies.

The data indicate an increase in the proportion of crime committed with other weapons after the legislation, which corresponds to the decrease in the proportion committed with firearms. The use of knives in particular has increased in homicide and attempted murder.

4. There is a strong relationship between alcohol and drug use and firearms misuse in the two rural jurisdictions.

The data upon which this finding is based are limited. However the relationship is striking and should not be ignored.

Suspects with criminal records who are involved in crimes involving firearms tend increasingly to have more serious records.

About 55 percent of all suspects involved in crimes with firearms have criminal records. No significant changes were observed in the post-legislation period in this percentage. However, of those suspects who do have criminal records, there has been a gradual shift for such suspects to have an increasing number of previous charges and for previous charges to have been related to violent offences. This would indicate that the population of persons involved in firearm crimes is shifting to more "hardened" criminals. From this in turn it could be inferred that the legislation has had a deterrent effect on suspects with less serious criminal histories.

6. Accidents with firearms were declining prior to 1978 but the legislation has contributed to further downward trends.

The rate of decline in accident rates increased following the introduction of the legislation.

Suicides with firearms declined moderately in the post-legislation period.

B. THE PROCESSES

8. Following 1979, courts imposed more severe sentences on firearms offences.

The immediate effects of the sentencing provisions were felt most sharply in 1980 and began to level off by the following year. Indications that the courts had responded to the legislation include:

- convictions for firearms offences were more likely to result in jail terms in 1981 than in 1979.
- firearms charge convictions resulted in longer jail terms in 1981 than in 1979.
- If convictions for use of a firearm in an indictable offence (s.83)
 occurred, the mandatory sentencing provisions tend to be enforced and
 the extent to which they were enforced increased over the three years
 1979 to 1981.

10. Robberies with firearms resulted in longer jail sentences after the implementation of Bill C-51.

In the case of Vancouver where more detailed data were available, this increase in severity in sentences for firearms robberies was not part of a pattern for more severe sentences for robberies generally.

- Following 1979, sentences for repeat firearms offenders were more severe.
- 12. The requirement for the mandatory imposition of prohibition orders following specified criminal convictions is seldom met.

In circumstances where the mandatory provision applied, less than 20 percent of criminal convictions resulted in prohibition orders.

13. The requirement that a return to a magistrate be made subsequent to a s.101 search and seizure is seldom met.

There seems to be considerable confusion as to when and if it is necessary for a report or a return to be given to a magistrate following a search and seizure pursuant to s.101 of the *Criminal Code*.

In addition to these 13 conclusions, other findings have been noted throughout the paper. However, the foregoing represent what in the researcher's opinion constitute the most important findings of the study.

RECOMMENDATIONS

The recommendations set out herein relate solely to the existing procedures found in the legislation.

The recommendations are:

- More precise procedural guidelines should be provided regarding the conduct of the various hearings provided for in the legislation, e.g., the FAC reference, the s.98(6) pre-emptive prohibition application, and the s.101 search and seizure hearing.
- The application of the return procedure following a s.101 search and seizure needs to be more clearly delineated.
- 3. The mandatory provisions of the s.98(1) prohibition orders should be emphasized to Crown Attorneys and judges. One means may be by having the legislation cross-reference s.83 and s.98(1).

One final comment is necessary. Consideration should be given to means of ensuring more uniform definition of crime statistics, and more uniform methods of collecting and recording crime-related data, in order to make the evaluation of future legislative provisions more effective and efficient.

NOTES

- It should be noted that the major portion of the national homicide statistics presented in the first progress report actually was only for murders, rather than for all homicides, which also includes manslaughters and infanticides.
- Data on the relative use of firearms for each individual year for the different crimes in the local
 jurisdictions are contained in Appendix 1. However, because of the fluctuations that may be
 expected from year to year, the discussion in the body of the report has been limited to
 aggregated pre- and post-legislation differences.
- 3. Canadian Centre for Justice Statistics. *Uniform Crime Reporting Statistics, Canada and the Provinces, 1977-1981: Offensive Weapons, August, 1982.*
- 4. Data also were obtained on the use of knives in Calgary from 1977 to 1981. However, such data were not available for robberies and weapon offences, and are further limited by the fact that only one year of pre-legislation data are available.
- 5. Neither of the R.C.M. Police jurisdications are totally rural. In Nova Scotia the ten selected detachments serve a population of approximately 234,000. Six of these detachments are almost completely rural while four have some urban pockets (approximately 25 percent). The 25 selected Saskatchewan detachments cover a far more dispersed population of about 200,000 (spread over approximately 210,000 square kilometers). Included in this area is a small city with a population of about 19,000. Despite the inclusion of some urban centers, the predominate characteristic of the R.C.M. Police jurisdications is rural.
- 6. For example, an injury with a pellet gun may have been categorized as an assault by one coder and mischief by another.

The reader also should note that in some instances there are discrepancies between the number of incidents in various offence categories as recorded in the occurrence report data and the numbers reported in the summary statistics. There are a number of reasons for this depending on the jurisdiction. These include the following:

— The summary statistics may include the number of victims. For example, if there are four robbery victims they will be coded as four robberies. However if the robbery was committed by one person there will be only one occurrence report.

 If one suspect committed four separate robberies, there still only may be one occurrence report but again the summary statistics will reflect four robberies.

 The occurrence report data segregate offences committed with air pistols and simulated firearms from the handgun offence counts. However the summary statistics often included these weapons as handguns.

- In at least one jurisdiction, counts of homicides also were kept manually for internal reasons and it was these manual tabulations rather than the computer counts which were included in the summary statistic counts. However the occurrence report data were initially flagged through the computer and if an offence had been entered into the computer without a weapon type indicated the computer did not "flag" the occurrence. In other words, the occurrence may have been included in a manual tabulation but not in the computer generated tabulations.
- 7. A fingerprint form should be submitted to the R.C.M. Police if at least one of the charges is indictable. However the submission of the forms by the individual police forces is voluntary. The study has no accurate estimate of what proportion are not submitted. Some police departments also submit forms on persons charged with pure summary offences. Again, there is no estimate of how many do so.
- 8. The F.P.S. data indicate whether the suspects had previous criminal charges, not necessarily convictions. The occurrence report data from the local police departments indicate the

extent of previous convictions. For ease of presentation, the term "previous record" will be used to refer to previous charges and/or convictions.

9. The first progress report indicated that 98.9 percent of suspects from the F.P.S. records had a previous criminal charge. However, the figures from the first progress report were limited to records from November, 1979, to March, 1980. Another reason for the discrepancy may be related to the fact that the original F.P.S. data have been further screened to eliminate non-firearm offences from offensive weapons charges.

The R.C.M. Police initially provided this study with selected information from records on persons charged with a firearms or offensive weapons charge, e.g., possession of a dangerous weapon when the weapon was a knife. Accordingly these records were further screened so that the F.P.S. data base used in this report only includes records where there was at least one charge explicitly related to a firearm, e.g., pointing a firearm. Thus if a charge of "possession of a weapon for a dangerous purpose" appears in the F.P.S. data base it means the suspect also was charged with a firearms offence, and accordingly, it is inferred that the dangerous weapon involved was a firearm.

Firearms charges for these purposes were defined as offences found in ss.83, 84(1) - (2), and 88(1) - 106.5(4) of the *Criminal Code*. It should be noted that charges relating to prohibited and restricted weapons were included in the definition of firearm charges, although strictly speaking, prohibited weapons may refer to more than firearms.

- 10. The data for the analysis of accidents and suicides have been collected from several sources:
 - the Hospital Morbidity Statistics Section of Statistics Canada provided data on firearms accidents resulting in injury or death in selected provinces for varying time periods:

| Nova Scotia | - 1972 to 1979 |
|------------------|----------------|
| Quebec | - 1974 to 1978 |
| Manitoba | - 1974 to 1980 |
| Saskatchewan | - 1971 to 1980 |
| Alberta | - 1974 to 1979 |
| British Columbia | - 1974 to 1980 |

- the Vital Statistics Section of Statistics Canada has provided national and provincial data on accidental firearms deaths and suicides;
- the Toronto Police Department provided suicide statistics for the period 1974 to 1981;
- the provincial hunter safety program co-ordinators in Nova Scotia, New Brunswick, Ontario, Saskatchewan and British Columbia provided hunting accident statistics for varying years:

| Nova Scotia | - 1960 to 1981 |
|------------------|------------------|
| New Brunswick | - 1966 to 1981 |
| Ontario | - 1961 to 1981 |
| Saskatchewan | - 1960 to 1981 |
| British Columbia | . — 1964 to 1981 |

It should also be noted that the definition of hunting accidents varies somewhat from province to province. It usually includes accidents in which a person is injured by a discharge of a hunting weapon (firearm or bow) outside the home and arising from the activity of hunting, including travel to and from the hunting area. In a few provinces it also includes accidents in the home with a hunting instrument.

- 11. Toronto suicide data also were obtained from Vital Statistics. However, because the Toronto police data were available to the end of 1981, it is these which are presented rather than those from Vital Statistics. There were some differences between the two sets of data. These are probably due to variations in reporting and classification. But the rates of firearm suicides as a percentage of total suicides were within relatively close ranges and followed the same declining trend over the years examined.
- 12. Until 1979 the Vital Statistics suicide data did not distinguish between suicides caused by firearms and those caused by explosives. It has been assumed that deaths caused by explosives constituted a minimal proportion of total suicides and in order not to distort the trend lines, incidents involving explosives were not excluded from the totals shown in Tables

A2.4 to A2.6 and Figures III.3 and III.4. However for interested readers, nationally there were two suicides using explosives in each of 1979 and 1980. Further, a national breakdown of the type of firearm used in these two years is as follows:

| | 1979 | 1980 |
|------------------------|------|------|
| Handgun | 32 | 36 |
| Long gun | 359 | 425 |
| Other (e.g., military, | 704 | 653 |
| unspecified) | | 000 |

- 13. Data were not collected from the firearms officer responsible for Quebec City because this firearms unit is responsible for a geographic area much larger than the city proper. The rural R.C.M. Police Divisions in Saskatchewan and Nova Scotia are not responsible for certificate and permit administration and therefore data were not collected from these jurisdictions either.
- 14. It should be noted that this does not necessarily imply that 21 out of every 10,000 persons have a registration certificate, because some individuals (e.g., collectors) have multiple certificates.
- 15. Since registration certificates are issued in Ottawa, local jurisdictions send recommendations directly to the Commissioner. The discrepancy between the C.P.F.O. and the F.R.A.S. figures probably is due to incomplete forwarding of registration certificate recommendation data by the local jurisdictions to the C.P.F.O. office.
- 16. Both Ottawa and Toronto in 1980 and 1981 show a larger number of carrying permits issued than registration certificates recommended (see Tables A3.5 and A3.6). This is mainly because carrying permits issued include renewals. There also may be instances of an applicant who already has a registration certificate, applying for a carrying permit at a later date.
- 17. Bill C-51 created a number of new offences, including:
 - using a firearm while committing or attempting to commit an indictable offence (s.83)
 - careless' storage and handling of firearms s.84(2)
 - importing prohibited weapons (s.93)
 - importing restricted weapons s.94(3)
 - delivering of a firearm to a person without a FAC s.95(1)
 - importing a firearm without a FAC s.95(3)
 - possession of a firearm while subject to a search and seizure prohibition s.101(10)
 - failing to report the loss or theft of restricted weapons or firearms from a business s.103(2),(3) and (8)
 - firearm businesses advertising or selling restricted weapons or firearms by mail orders in contravention of regulations s.103(6) and (8)
 - firearm businesses transporting firearms in contravention of regulations s. 103(7) and (8)
 - making false statements on applications for certificate or permits s.106.5(6)
 - non-compliance with any term of a permit or certificate s.106.5(3)
 - failing to deliver up a permit or certificate when subject to revocation or prohibition s.106.5(4)

An example of expanding the definition of an offence was changing the terminology of "dangerous use" of firearms to "careless or unreasonable" use, this latter phrasing having a wider application.

- 18. Two Supreme Court of Canada decisions have interpreted the scope of s.83. In Nicholson v. The Queen (1982), 64 C.C.C. (2d) 116, the Court held that the minimum three year jail sentence on the basis of conviction of an offence prior to 1978, applied even if the accused had been convicted only of being a party to an indictable offence using a firearm, i.e., had not used the firearm himself. In McGuigan v. The Queen (1982), 66 C.C.C. (2d) 97, the Court held that an accused could be convicted under s.83 if he had been a party to a current offence contrary to s.83: in this case being the driver of the getaway vehicle subsequent to a firearm robbery.
- 19. If more than six charges were laid, the charges recorded on the FPS data base were selected first on the basis of whether it was a firearms charge and second, on the basis of the

seriousness of the charge. Multiple charges in a record include charges disposed of two weeks before and two weeks after the firearm charge and thus may include charges arising out of other incidents. However, our judgment is that this would lead to little, if any, distortion of the data or conclusions.

The reader should note further that the R.C.M. Police also rely on the fingerprint records when preparing the Commissioner's annual report to the Solicitor General. However, there are differences in methods of computation, based in part on the selection of the date of record and in part on the fact that this evaluation only records up to six charges per suspect. Thus the absolute numbers found in this report may differ somewhat from those found in the Commissioner's annual firearms report.

- 20. The selection of the six charges analysed in records having more than six charges was done on the same basis as with the F.P.S. data (see note 19).
- 21. F.P.S. data from July to December, 1978 were collected. However, the F.P.S. data are recorded according to the date of sentence rather than the date of the incident. There is usually a substantial time lapse between the date criminal charges are laid and the date of actual sentence. As a result, a high proportion of the 1978 data probably reflect dispositions of offences as they were defined prior to the proclamation of Bill C-51. For example, prior to 1978, a s.83 offence referred to possession of a weapon for a dangerous purpose. Much of the sentencing data in this section is charge specific, and accordingly, the data on firearms charges are presented for 1979 to 1981 only. However, in analyses where the reference to the firearms data is generalized, e.g., the number of suspects with previous criminal charges, the 1978 data will be included.
- 22. A s.98(1) mandatory prohibition shall be ordered when:
 - the defendant has been convicted of an indictable offence against a person, which offence has a maximum sentence of ten years or more; or
 - the defendant has been convicted pursuant to s.83 (using a firearm while committing an indictable offence).

In addition to the mandatory order a minimum term is imposed. If the conviction is a first one for such an offence, the prohibition is to be for a term of at least *five years*. Otherwise it is subject to a term of at least *ten years*.

It now has been held that this section is not limited to offences using a firearm but has application to all offences involving threats or violence: *R. v. Broome* (1982), 63 C.C.C. (2d) 426 (Ont. C.A.); *R. v. Bear* (1982), 7 W.C.B. 143 (Sask. C.A.). Furthermore, the B.C. Court of Appeal has held that it was not necessary that the accused actually be convicted of an offence in the commission of which violence occurred, if the violence occurred in a manner closely related to the commission of the offence for which the accused was convicted. In the case in question the accused had entered a private home and assaulted the occupant but had been convicted of break and enter; *R. v. Howard* (1981), 60 C.C.C. (2d) 344.

- 23. A s.98(2) discretionary prohibition may be imposed at the discretion of the judge when an individual has been convicted of either, an offence involving the use, carriage, handling, shipping or storage of any firearm or amunition, or any offence (other than one incurring mandatory prohibition) in which violence against a person was used, threatened or attempted. The term can be any period up to five years. In R. v. Campbell (1982), 8 W.C.B. 122 (Ont. Prov. Ct.), it was held that a prohibition order can be issued upon conviction of any firearms offence, notwithstanding no threat of violence was used.
- The section was held to be valid criminal legislation in R. v. Anderson (1981 82) 6 W.C.B. 49 (Ont. Co. Ct.); R. v. Rosin et al (1981 82), 6 W.C.B. 108 (Ont. Dist. Ct.) and R. v. Motiuk (1981), 60 C.C.C. (2d) 161 (B.C.S.C.).
- 25. The first report commented at some length on the problems of imcomplete recording of prohibition orders in the Canadian Police Information Centre (CPIC), particularly for conviction prohibitions. This problem has not been followed-up in any detail. As both courts and police have become more aware of firearms prohibitions, it is likely that recording has become more accurate though this conclusion has not been tested.

In any event, the problem should not detract from the analyses of trends in the use of prohibitions. The analysis of conviction prohibitions relies on the incidents recorded directly

on an accused's criminal record in the F.P.S. data base and/or local police records. The recording of prohibitions in these data bases should be relatively accurate. However, prohibition orders recorded in the C.P.F.O. monthly reports are incomplete and accordingly are not presented. CPIC recorded annual increases in the number of prohibitions registered. The annual increases were as follows:

- December 24, 1978 to December 31, 1979 1,891
- December 31, 1979 to December 31, 1980 1,679
- December 31, 1980 to December 31, 1981 1,933

These figures do not include prohibitions issued for terms of less than one year, i.e., expired before December 31, but do give some indication that there are consistent increases in the absolute number of prohibitions registered.

- Re Attorney General for Ontario and Audrey Leona Thomson (1979-80), 3 W.C.B. 441 (Ont. Prov. Ct.) and Re Beaulieu (1979-80), 4 W.C.B. 349 (Sask. Q.B.).
- 27. The Governor in Council is empowered to make regulations which include:
 - the handling, securing, storage, display and advertising of restricted weapons, firearms and ammunition;
 - allowing police officers and other authorized persons to enter into any business premise during business hours, for the purpose of inspecting storage facilities and display methods;
 - the handling, securing and display of weapons by operators and persons employed by approved museums;
 - the mail order sale of restricted weapons, firearms, and ammunition; and
 - the handling, shipping, etc., of firearms and ammunition by persons in businesses that include transportation of goods.

Furthermore, businesses selling firearms and businesses that include the transportation or shipping of restricted weapons, firearms or ammunition must report every loss or destruction of a restricted weapon or firearm, or any theft of such weapon, firearm or ammunition that occurs in the course of the business.

- 28. Other means of imposing safe handling and storage standards on owners include:
 - the ability to impose reasonable conditions relating "...to the use, carriage, possession, handling or storage of weapons or ammunition...";
 - the requirement that without a carrying permit, restricted weapons be kept at the holder's usual dwelling home or place of business;
 - the ability of the Governor in Council to make regulations describing conditions relating to the storage, display, handling and transportation of restricted weapons forming part of the collection of bona fide gun collectors;
 - the fact that non-compliance with a permit condition is a criminal offence; and
 - the provision that anyone who mislays, loses or had a restricted weapon stolen must report it to an authorized person with reasonable dispatch.

Furthermore, even individuals who do not possess a firearm are subject to controls in that anyone finding a prohibited or restricted weapon is obliged to deliver or report it to an authorized person with reasonable dispatch.

«PARTIE II.1

ARMES À FEU ET AUTRES ARMES OFFENSIVES

Interprétation

82. (1) Dans la présente Partie,

Définitions

«arme à autorisation restreinte» désigne

permettre de viser et de tirer à l'aide a) toute arme à feu qui n'est pas une arme prohibée, destinée, de par sa construction ou ses modifications, à d'une seule main,

"restricted..." autorisation

restreinte» rarme à

b) toute arme à feu qui

(i) n'est pas une arme prohibée, est munie d'un canon de moins de dixhuit pouces et demi de longueur et peut tirer des munitions à percussion centrale d'une manière semiautomatique, ou

(ii) est conçue ou adaptée pour tirer lorsqu'elle est réduite à une longueur de moins de vingt-six pouces par repliement, emboîtement ou autrement, ou

c) toute arme à feu destinée, de par permettre de tirer rapidement plusieurs balles pendant la durée d'une sa construction ou ses modifications, à

frame or receiver of such a barrelled weapon and anything that can be adapted for use as a firearm;

"firearms "fire acquisition fire certificate" fire acquisition fire certificate fire contorisation...

"firearms acquisition certificate" means a firearms acquisition certificate issued by a firearms officer under section 104 or a hunting licence, certificate, permit or other document issued under the authority of a law of a province that, by virtue of an order issued under section 105, is deemed to be a firearms acquisition certificate:

"firearms officer" *préposé...*

"firearms officer" means any person who has been designated in writing as a firearms officer by the Commissioner or the Attorney General of a province or who is a member of a class of persons that has been so designated;

"local registrar of firearms" means any person who has been designated in writing as a local registrar of firearms by the Commissioner or the Attorney General of a province or who is a member of a class of police officers or police con-

"local registrar of firearms"

stables that has been so designated; "permit" means a permit issued under section 106.2;

permit.

"prohibited "prohibited weapon" means weapon" (a) any device or

(a) any device or contrivance

pression sur la détente et qui, lors de l'entrée en vigueur du présent alinéa, était enregistrée comme arme à autorisation restreinte et faisait partie de la collection, au Canada, d'un véritable collectionneur d'armes à feu, ou

d) n'importe quelle arme qui n'est ni une arme prohibée, ni un fusil ni une carabine d'un genre qui, de l'avis du gouverneur en conseil, peut raisonnablement être utilisé au Canada pour la chasse ou le sport et qui est, par décret du gouverneur en conseil, déclarée arme à autorisation restreinte;

arme à feu désigne toute arme, y compris une carcasse ou chambre d'une telle arme ainsi que toute chose pouvant être adapté pour être utilisé comme tel, susceptible, grâce à un canon qui permet de tirer du plomb, des balles ou tout autre projectile, d'infliger des lésions corporelles graves ou la mort à une personne;

"firearm"

«arme prohibée» désigne

a) tout appareil ou dispositif propre ou destiné à amortir ou à étouffer le son ou la détonation d'une arme à feu, b) tout couteau dont la lame s'ouvre

automatiquement par gravité ou force

arme prohibée»

designed or intended to muffle or stop
the sound or report of a firearm,
the sound or report of a firearm,

(b) any knife that has a blade that opens automatically by gravity or centrifugal force or by hand pressure applied to a button, spring or other device in or attached to the handle of the knife,

(c) any firearm, not being a restricted weapon described in paragraph (c) of the definition of that expression in this section, that is capable of firing bullets in rapid succession during one pressure of the trigger,

(d) any firearm adapted from a rifle or shotgun, whether by sawing, cutting or other alteration or modification, that, as so adapted, has a barrel that is less than eighteen inches in length or that is less than twenty-six inches in overall length, or

(e) a weapon of any kind, not being an antique firearm or a firearm of a kind commonly used in Canada for hunting or sporting purposes, that is declared by order of the Governor in Council to be a prohibited weapon;

"registration certificate" means a restricted weapon registration certificate issued under section 106.1;

centrifuge ou par pression manuelle sur un bouton, un ressort ou autre dispositif incorporé ou attaché au manche. c) toute arme à feu, autre qu'une arme à autorisation restreinte décrite à l'alinéa c) de la définition de cette expression au présent article, pouvant tirer rapidement plusieurs balles pendant la durée d'une pression sur la détente.

d) toute arme à feu sciée, coupée ou modifiée de façon à ce que la longueur du canon soit inférieure à dixhuit pouces ou de façon à ce que la longueur totale de l'arme soit inférieure à vingt-six pouces, ou

e) n'importe quelle arme qui n'est ni une arme à feu historique, ni une arme à feu d'un genre utilisé habituellement au Canada pour la chasse ou le sport et qui est, par décret du gouverneur en conseil, déclarée arme prohibée;

«armes à feu historiques» s'entend des armes à feu fabriquées avant 1898 et qui n'ont pas été conçues ni modifiées pour employer des munitions à percussion annulaire ou centrale ou si elles ont été ainsi conçues ou modifiées, qui ne peu-

(2) Nonobstant la définition d'earme à feu» au paragraphe (1), aux fins des défiautorisation restreinte» dudit paragraphe et aux fins de l'article 91, des paragraphes 95(1) et (3) et des articles 100, 102, 103 et 106.8, sont réputées ne pas être des armes nitions d'«arme prohibée» et d'«arme à feu, les armes suivantes:

a) les armes à feu historiques sauf les survantes: (i) celles qui, n'était le présent paragraphe, seraient des armes à autorisation restreinte,

(ii) celles que leur possesseur a l'inention de décharger;

deemed not to be firearms weapons Certain

(2) Notwithstanding the definition "firearm" in subsection (1), for the purposes of the definitions "prohibited weapon" and "restricted weapon" in that subsection and for the purpose of section 91, subsections 95(1) and (3) and sections 100, 102, 103 and 106.8, the following weapons shall be deemed not to be firearms, namely,

(a) an antique firearm unless,

(i) but for this subsection, it would be a restricted weapon, and

intends to discharge it;

(ii) the person in possession thereof

«préposé aux armes à feu» "firearms

- (b) any device designed, and intended by the person in possession thereof, for use exclusively for
- (i) signalling, notifying of distress or firing stud cartridges, explosive-driven rivets or similar industrial ammunition, or
- (ii) firing blank cartridges; and
- (c) any shooting device designed, and intended by the person in possession thereof, for use exclusively for
- (i) slaughtering of domestic animals,
 - (ii) tranquilizing animals, or
- (iii) discharging projectiles with lines attached thereto; and
- (d) any other barrelled weapon where it is proved that such weapon is not designed or adapted to discharge a shot, bullet or other missile at a muzzle velocity exceeding five hundred feet per second or to discharge a shot, bullet or other missile that is designed or adapted to attain a velocity, exceeding five hundred feet per second.

- b) tout instrument conçu et dont l'utilisateur entend se servir uniquement comme suit
- (i) pour signaler que l'on est en détresse ou pour appeler au secours, pour tirer des cartouches d'ancrage, des rivets explosifs ou d'autres munitions industrielles semblables,
- (ii) pour tirer des cartouches à blanc; c) tout instrument de tir conçu et dont l'utilisateur entend se servir uniquement comme suit:
- (i) pour abattre des animaux domestiques,
 (ii) pour inoculer des tranquillisants à des animaux,
- (iii) pour tirer des projectiles auxquels des fils sont attachés; et
- d) toute autre arme pourvue d'un canon dont il est démontré qu'elle n'est ni conçue ni adaptée pour tirer du plomb, des balles ou quelque autre projectile à une vitesse initiale de plus de cinq cents pieds à la seconde ni pour tirer du plomb, des balles ou quelque autre projectile conçus ou adaptés pour atteindre une telle vitesse.

Designated officer or constable

designated in writing by the Commissioner or the Attorney General of a province for the purposes of this subsection or who is a member of a class of police officers or police constables that has been so designated may perform such functions and duties of a local registrar of firearms under subsections 106.1(1) to (6) and subsections 106.2(3) and (4) as are specified in the designation.

Offences Related to the Use of Firearms and other Offensive Weapons

Use of firearm during commission of offence, etc.

83. (1) Every one who uses a firearm (a) while committing or attempting to commit an indictable offence, or

(b) during his flight after committing or attempting to commit an indictable offence.

whether or not he causes or means to cause bodily harm to any person as a result thereof, is guilty of an indictable offence and is liable to imprisonment

(c) in the case of a first offence under this subsection, except as provided in paragraph (d), for not more than fourteen years and not less than one year; and

(3) L'officier ou agent de police nommé par écrit par le commissaire ou le procureur général d'une province aux fins du présent paragraphe, ou l'officier ou agent de police d'une catégorie désignée ainsi, peut exercer les fonctions d'un registraire local d'armes à feu, prévues aux paragraphes 106.1(1) à (6) et 106.2(3) et (4), et ou la désigna-

l'ordonnance qui y est prévue, les personnes suivantes:

- a) celle contre qui l'ordonnance prévue au paragraphe (6) est rendue;
- b) le procureur général ou un procureur constitué par lui dans les cas où le magistrat, après avoir entendu la demande visée au paragraphe (4), ne conclut pas dans le sens indiqué au paragraphe (6) ou, s'il le fait, lorsqu'il ne rend pas l'ordonnance prévue aux alinéas (6)a) ou b).

(9) Au présent article,

"cour d'appel" a le sens que lui donne le paragraphe 98(11);

cour d'appel»

«magistrat»

Définitions

«magistrat» désigne un magistrat compétent dans la circonscription territoriale où réside la personne visée par une demande faite en vertu du paragraphe (1) ou par une saisie sans mandat en vertu du paragraphe (2).

(10) Est coupable

a) d'un acte criminel et passible d'un emprisonnement de cinq ans, ou

Possession d'armes à feu ou de munitions interdite par any order made pursuant to paragraph

- (a) is guilty of an indictable offence and is liable to imprisonment for five vears: or
- (b) is guilty of an offence punishable on summary conviction.

Found, Lost, Mislaid, Stolen and Defaced Firearms and other Weapons

Finding weapon

who, on finding a prohibited weapon or restricted weapon or firearm that he has reasonable grounds to believe has been lost or abandoned, does not with reasonable despatch

- (a) deliver it to a peace officer, a local registrar of firearms or a firearms offi-
- (b) report to a peace officer, a local registrar of firearms or a firearms officer that he has found it.
- (2) Every one commits an offence who, having lost or mislaid a restricted weapon for which he has a registration certificate

Lost weapon,

 b) d'une infraction punissable sur déclaration sommaire de culpabilité,

quiconque a en sa possession une arme à feu, une autre arme offensive, des munitions ou des substances explosives pendant que cela lui est interdit par une ordonnance rendue en vertu de l'alinéa (6)b).

Armes à feu et autres armes trouvées, perdues, égarées, volées ou maquillées

que, après avoir trouvé une arme prohibée, une arme à autorisation restreinte ou une arme à feu, qu'il croit pour des motifs raisonnables avoir été perdues ou abandonnées.

Arme trouvée

- a) ne les remet pas, avec diligence raisonnable, à un agent de la paix, à un registraire local d'armes à feu ou à un préposé aux armes à feu; ou
- b) ne fait pas connaître, avec diligence raisonnable, à un agent de la paix, à un registraire local d'armes à feu ou à un préposé aux armes à feu qu'il les a trouvées.
- (2) Commet une infraction, quiconque, ayant perdu, égaré ou s'étant fait voler une arme à autorisation restreinte pour

Arme perdue,

or permit or having had such a restricted weapon stolen from his possession, does not with reasonable despatch report to a peace officer, or a local registrar of firearms that he has lost or mislaid such weapon or that such weapon has been stolen from him.

Tampering with serial number

- (3) Every one commits an offence who, without lawful excuse, the proof of which lies on him
- (a) alters, defaces or removes a serial number on a firearm; or
- (b) has in his possession a firearm knowing that the serial number thereon has been altered, defaced or removed.

evidence that a person has in his possession a firearm the serial number of which has been wholly or partially obliterated is, in the absence of any evidence to the contrary, proof that such person has the firearm in his possession knowing that the serial number thereon has been altered, defaced or removed.

Punishment

(5) Every one who contravenes this section

laquelle il détient un certificat d'enregistrement ou un permis, ne fait pas connaître, avec diligence raisonnable, à un agent de la paix ou à un registraire local d'armes à feu qu'il a perdu ou égaré cette arme ou qu'on la lui a volée.

(3) Commet une infraction, quiconque, sans excuse légitime, dont la preuve lui incombe

numéro de série

a) modifie, maquille ou efface un numéro de série sur une arme à feu; ou

sachant que son numéro de série a été

modifié, maquillé ou effacé.

b) a en sa possession une arme à feu en

(4) Dans toute procédure engagée en vertu du paragraphe (3), la preuve qu'une personne a en sa possession une arme à feu dont le numéro de série a été totalement ou partiellement effacé fait preuve, en l'absence de preuve contraire, que cette personne est en possession de l'arme en sachant que son numéro de série a été modifié, maquillé ou effacé.

Preuve

(5) Quiconque commet une infraction visée au présent article est coupable

Peine

a) d'un acte criminel et passible d'un emprisonnement de cinq ans; ou

(a) is guilty of an indictable offence and is liable to imprisonment for five vears; or

ration sommaire de culpabilité.

(b) is guilty of an offence punishable on summary conviction.

copy or an extract of the provisions of this section.

Disposal of restricted SI

(6) A notice under subsection (5) shall specify therein a reasonable period of time within which the person affected by the revocation or refusal may surrender to a police officer or otherwise lawfully dispose of any restricted weapon, firearm or ammunition lawfully possessed by him prior to the revocation or refusal the possession of which by him has thereby become unlawful, and such person is not liable to prosecution by reason only of his having any such restricted weapon, firearm or ammunition in his possession during such period of time.

(7) Where an appeal is taken under subsection (8), the period of time referred to in subsection (6) does not commence until that appeal is finally disposed of.

Idem

(8) A person who feels himself aggrieved by

(a) any action or decision taken under this section, or

(b) the failure of a local registrar of firearms to indicate on the copy of an application for a registration certificate that is sent by him to the Commissioner

(6) L'avis prévu au paragraphe (5) doit indiquer qu'un délai raisonnable, lequel doit être spécifié, est accordé à la personne visée par la révocation ou le refus pour disposer légalement, en les remettant à un officier de police ou autrement, des armes à autorisation restreinte, autres armes à feu ou munitions qu'elle possédait jusqu'alors légitimement mais qu'elle ne peut plus légalement avoir en sa possession. Pendant ce délai, aucune poursuite ne peut être intentée contre elle pour possession de ces armes ou munitions.

(7) Lorsque appel est interjeté en vertu du paragraphe (8), le délai mentionné au paragraphe (6) ne commence à courir qu'après la décision finale sur l'appel.

Idem

(8) Les personnes qui s'estiment lésées *a*) par une mesure ou décision prise en vertu du présent article; ou

Appel

b) par l'omission du registraire local d'armes à feu de faire, sur la copie de la demande de certificat d'enregistrement qu'il envoie au commissaire en application du paragraphe 106.1(5), une ins-

Signification de l'avis d'appel

pursuant to subsection 106.1(5), any of the matters referred to in subsections 106.1(3) and (4) that is applicable in respect of the application,

which he was notified of the action or decision or became aware of the failure, unless before or after the expiration of that period further time is allowed by a magistrate, appeal to a magistrate from the action, decision or failure by filing with the magistrate a notice of appeal, setting out with reasonable certainty the action, decision or failure complained of and the grounds of appeal, together with such further material as the magistrate may require.

with a magistrate under subsection (8) and of any further material required to be filed therewith shall be served within fourteen days of the filing of the notice, unless before or after the expiration of that period further time is allowed by a magistrate, on the person who took the action or decision or who was responsible for the failure being appealed from or on such other person as the magistrate may direct.

Service of notice of appeal

cription visée aux paragraphes 106.1(3) et (4) ayant trait à la demande, peuvent, dans les trente jours de la notification de la mesure ou décision, ou de la découverte de l'omission, sous réserve de prorogation accordée par un magistrat avant ou après expiration de ce délai, interjeter appel de la mesure, de la décision, ou du fait d'avoir omis de faire l'inscription en cause, devant un magistrat en produisant devant lui un avis d'appel indiquant avec une précision raisonnable la mesure, la décision ou l'omission dont elles se plaignent, les motifs de l'appel ainsi que tout autre élément qu'il pourrait exiger.

duit devant un magistrat en vertu du paragraphe (8), et de tout autre élément dont la production est requise avec cet avis d'appel, doit être signifiée dans les quatorze jours de la production de l'avis, sauf prorogation accordée par un magistrat avant ou après l'expiration de ce délai, à la personne qui a pris la mesure ou la décision, ou qui est responsable de l'omission dont il est fait appel, ou à telle autre personne qu'indique le magistrat.

Appellant as witness

(10) For the purposes of an appeal under subsection (8), the appellant is a competent and compellable witness.

Disposition of

- (11) On the hearing of an appeal under subsection (8), the magistrate may
- (a) dismiss the appeal; or(b) allow the appeal and
- (i) cancel the revocation of the registration certificate or permit or direct that a registration certificate or permit be issued to the applicant, as the case may be, or
- (ii) direct that a registration certificate be issued notwithstanding the failure referred to in paragraph (8.16)

Burden on applicant

appeal under subsection (8) heard by him by dismissing it unless the applicant establishes to the satisfaction of the magistrate that a disposition referred to in paragraph (11)(b) is warranted.

Appeal to appeal court

- (13) Where the magistrate
 (a) dismisses an appeal under subsection (11), the appellant, or
- (b) allows an appeal under subsection

(10) Aux fins d'un appel en vertu du paragraphe (8), l'appelant est un témoin compétent et contraignable.

Témoignage de

l'appelant

(11) Sur audition d'un appel en vertu du paragraphe (8), le magistrat peut

Suite donnée à

- a) rejeter l'appel, ou
- b) admettre l'appel et
- (i) annuler la révocation du certificat d'enregistrement ou du permis ou ordonner qu'un certificat d'enregistrement ou un permis, selon le cas, soit délivré au requérant, ou
- (ii) ordonner la délivrance du certificat d'enregistrement nonobstant l'omission visée à l'alinéa (8)b).

(12) Le magistrat doit rejeter l'appel entendu en vertu du paragraphe (8) à moins que l'appelant ne prouve, à la satisfaction du magistrat, que l'une des dispositions de l'alinéa (11)b) est justifiée.

Fardeau de la

dispositions de la Partie XXIV s'appliquant mutatis mutandis, sauf les articles 752 à 752.3 et 761 à 770, interjeter l'appel de la décision d'un magistrat, les personnes suivantes:

Appel porté devant la cour d'appel

- (i) the Attorney General of Canada or counsel instructed by him for the purpose, if the person who took the sible for the failure referred to in varagraph (8)(b) that was appealed rom to the magistrate was the Comaction or decision or who was responnissioner or a local registrar of firearms appointed by him, or
- instructed by him for the purpose, in (ii) the Attorney General or counsel any other case,

may appeal to the appeal court against the dismissal or against the allowing of the '52.3 and sections 761 to 770 apply, mutatis mutandis, in respect of such an appeal, as the case may be, and the provisions of Part XXIV except sections 752 to
